

New SAF HERCULES landing gear available from June 2017.

SAF-HOLLAND are launching a new landing gear series called the “HERCULES”.

It was designed for use in curtainsiders, refrigerated vehicles, tankers and silo trailers, as well as tippers and sliding floor trailers, low-loaders and heavy-duty transporters.

The focus during its development was on ensuring ease of use, as well as stability and a low weight.

The result is a **weight reduction of 8 kg per set** in comparison with the SAF TITAN^{PRO}.

It is available in **5 mounting heights** – 650, 700, 750, 800 and 850 mm - and a compensator foot is fitted as standard.

A continuous backplate gives a convenient variety of mounting options, making it easier to fit to the vehicle frame, and facilitating the replacement of the most common types of landing gear on the market on existing vehicles.

The ATLAS, TITAN and TITAN^{PRO} series available up to now will be replaced by the SAF HERCULES, simplifying stock-keeping considerably.

The changeover will take place from June 2017.
