

SAF low-maintenance ballrace turntable update.

As of August 2017, SAF-HOLLAND will completely lubricate the low-maintenance ballrace turntables type BR-W- ... and deliver them ready for operation. The initial greasing prior installation of the low-maintenance ballrace turntables is no longer necessary.

This improvement reduces installation time and simplifies handling during assembly. After expiry of the low-maintenance period (300,000 km or 3 years, whichever occurs first, when operated on paved roads), the ballrace turntable should be greased in standard service intervals.

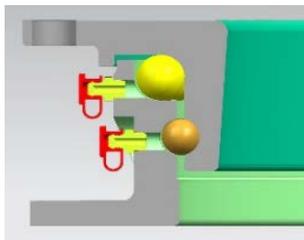

*For additional information about the maintenance of ballrace turntables please refer to SAF-HOLLAND Installation and Maintenance Manual.

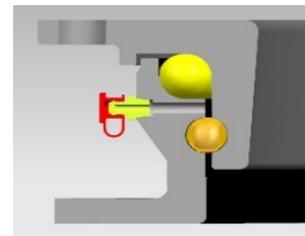

SAF double-row ballrace turntable design update

As of September 2017, SAF-HOLLAND will change the number and position of greasing points to all SAF double-row ballrace turntables.

The current design that includes two rows with 4 greasing points distributed at 90° will be replaced with a row consisting of 6 greasing points equally distributed at an angle of 60°.

Old: 4 points x 2 row x 90°

New: 6 Points x 1 row x 60°

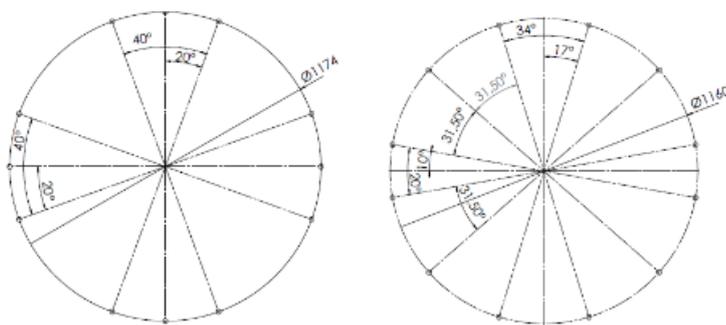

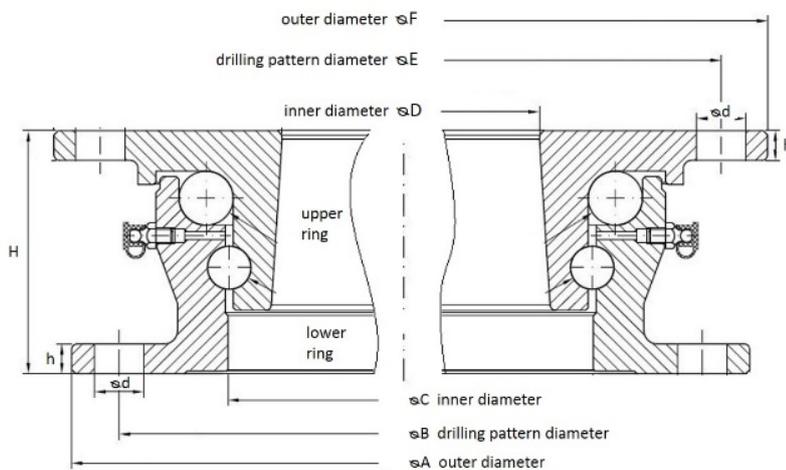

This change will make the installation process easier, reduce the maintenance time and provide more clearance for the installation of lubrication systems.

The recommended maintenance regime remains unchanged.

Introduction of the new SAF-HOLLAND double-row ballrace turntable

Due to the Customers' demand for 20t ballrace turntable with outer diameter of $\varnothing 1208$ mm, SAF-HOLLAND is introducing a new model, P/N 1038 30 000087 0 with the following dimensions:

Type	Part No.	Axial load (kN)	Weight (kg)	A (mm)	B (mm)	C (mm)	D (mm)	E (mm)	F (mm)	$\varnothing d$ (mm)	h (mm)	H (mm)	Drill template
BR-S-20-12a-U-2-08	103830 0000870	200	104	1195	1160	1080	1040	1174	1208	18	11	90	8

Drilling pattern 8

Additional drilling patterns are available on request.

The new ballrace turntable will be available from September 2017.
