

# Reliable identification of spare parts with NFC

SAF-HOLLAND turns smartphones into workshop assistants

# Your smartphone as a workshop assistant. Stick to it. Scan. Identify spare parts.

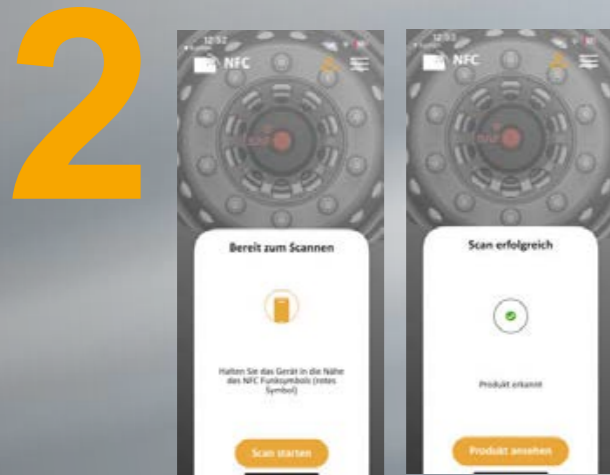

Here you can find the video  
with corresponding  
instruction

## Stick to it

Open the app on your cell phone and hold it to the hubcap.

Avoid unnecessary and time-consuming searches for technical literature and in spare parts catalogues. This creates real added value for workshops and fleets!

## Scan

Scan the hubcap for trailer axle identification.

## Identify spare parts

You will now be shown the trailer axle details, allowing you to easily order your spare parts in POD or Knowledge Portal.

# 5 good reasons why you can't go past the new NFC hubcap.

**Easy and fast identification** of the trailer axle (crawling under the trailer to identify the type plate becomes obsolete)

The parameters of the identified product (product image, product category, serial number, product type, etc.) can be shared via a „share function“ from the app through various channels (mail, WhatsApp, SMS, etc.).

The search for suitable literature is made much easier because information is tailored to the product.

By searching for literature and spare parts more efficiently, workshops can save time, which ultimately results in cost savings on the part of the end customer or fleet

The search for the right spare part is made easier, as spare parts are searched for at serial number level (analogous to the already existing QR code on the type plate)

## Engineering Your Road to Success

The SAF-HOLLAND Group is one of the leading international manufacturers of suspension-related assemblies and components for trailers, trucks and buses. Our innovative products increase the efficiency, safety and environmental friendliness of commercial vehicles, contribute to the success of our customers. With around 5,900 employees worldwide, we are at the forefront of shaping the future of the transportation industry.
