

New SAF Axle Generation for 9 and 11 t Loads

From August 2005 SAF will be gradually introducing a new weight-optimised axle generation with disc and drum brakes. Typical for the new axle generation is the proven maintenance-free preset wheel bearing technology from the **INTEGRAL series**.

Further advantages of the new axle generation, which can be combined with both **INTRA** and **MODULAR** air suspension series, is a high-quality complete cathodic dip coating of the wheel hubs, 100% pre-prepared for ABS as well as the modern image which is based on the well-known **INTEGRAL series**.

B-Series

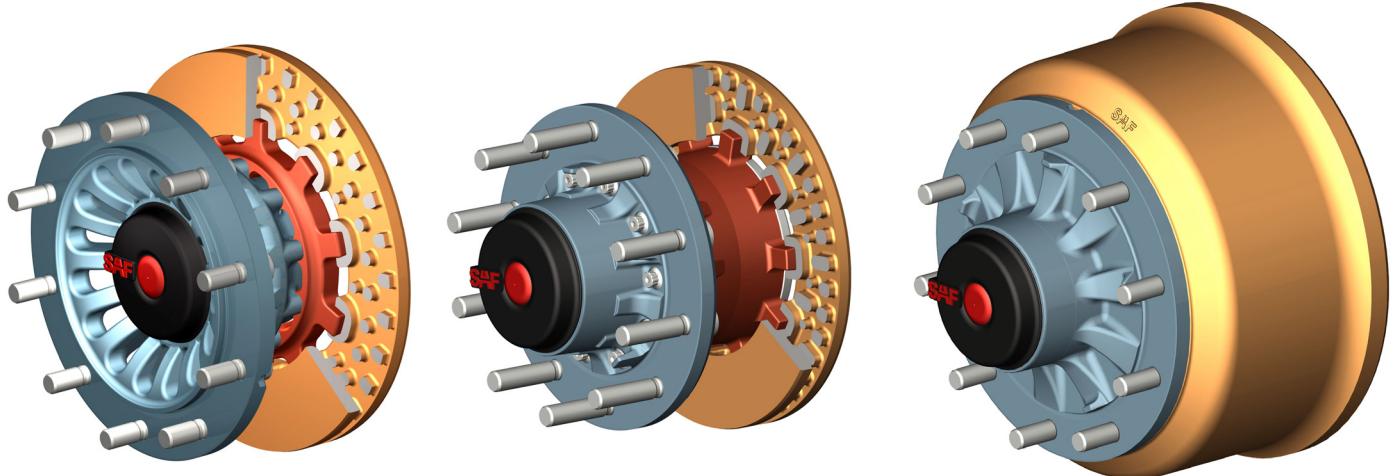

With disc brakes for single wheels ET120

Test Reports and Homologations

The test reports for all disc and drum brakes are available from SAF or can be downloaded from the SAF homepage in the Internet. The test report numbers remain the same.

Please note that with the introduction of the new axle generation, the WABCO disc brakes will be updated to the new NG-Generation. The Test Report numbers for the WABCO PAN 22-1 (NG22) remain the same, however the Test Report will be updated. The Test Reports for the WABCO PAN19-1 (NG19) are not available yet; a series start is first planned for mid 2006. SAF will provide details about the new WABCO brakes in a separate "Important Information".

If the current axle types appear in the vehicle type approval, it should be updated to show the new axle type.

Introduction Dates and Procedure

The new axle generation will be introduced gradually. Your contact at SAF will coordinate with you on the exact introduction dates of the individual axle types.

Further Enquiries and Information

Your corresponding contact person is available for all further enquiries and information.
