Preset Wheel Ends are factory assembled so they arrive ready for installation. While conventional wheel ends contain separate components which must be precisely aligned and adjusted during installation, Preset Wheel Ends install in minutes by simply placing the complete sub-assembly on the axle and torquing the retaining nut to 300 ft-lbs. There is no chance of misalignment or damage of components during installation, which is a major cause of premature wheel end wear and failure. Unlike unitized wheel ends, Preset Wheel Ends are fully field serviceable with conventional tools and equipment. Preset Hubs (Aluminium) are available for 8 stud 275 PCD, 10 Stud 285 PCD and 10 stud 335 PCD Outboard Alex only.
