

SAF Axles with KNORR Disc Brakes with the SAF identification SBK 2243, \bar{A} Disc: 430mm

In the course of product development, the KNORR disc brake with the SAF identification SBK 2243 has been revised.

See „Important Info No. 15“

Recommended painting procedures

Paint information:

When painting the suspension/axle components protect the rubber seal membrane and the roll membrane with appropriate cover. These parts must be kept free from paint to prevent damage to the rubber material.

Attention: Is there a paint protector on the roll membrane it has to be removed before operation.

Mounting information:

When fitting the brake chamber the rubber seal membrane **can remain** on this position, **must not be removed** from the matting surface caliper/brake chamber. This will not have a critical effect to the caliper actuation.
