

## SAF CBX40 Trailer Air Suspensions

### Product Change Notice for the MAX-VALVE™ Ride Height Control Valve

Effective with shipments September 2012

#### Please Note:

A product update has been made to the MAX-VALVE™ height control valve used on the CBX40 trailer air suspension system. In our ongoing efforts to give the industry the highest quality product available, we have increased the air flow on the fill side of the valve, improving the time required to reach ride height.

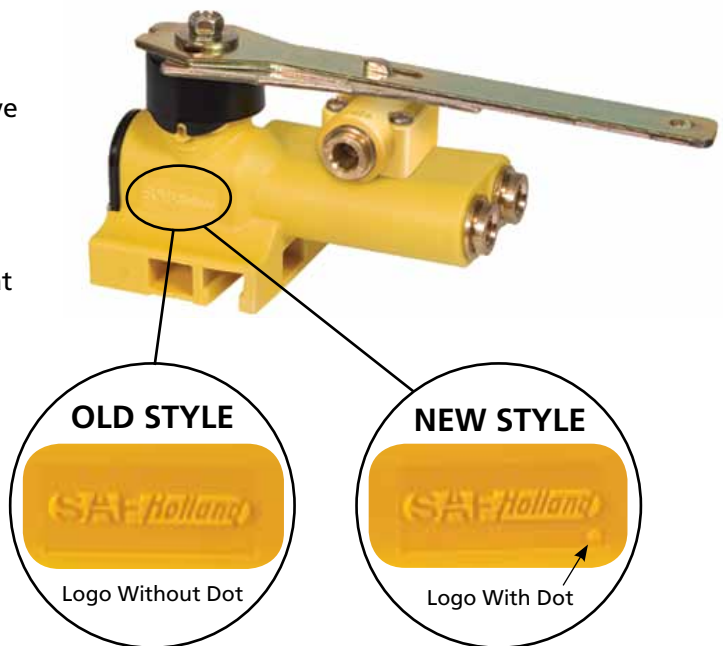

New style MAX-VALVE™ height control valves can be identified by the dot that is located near the logo that is molded into the valve body.

#### Part Number Change

As a result of this product update, the new style MAX-VALVE™ height control valves have been assigned a new part number ( see table below).

#### MAX-VALVE™

(Valve with dump shown)

NEW PART NUMBER	OLD PART NUMBER	DESCRIPTION
90560151	90560121	MAX-VALVE w/ high flow dump - w/ 90° swivel fittings
