

SAF UltraLite Trailer Mechanical Slider Suspensions

Product Change Notice for SAF Mechanical Trailer Slider Suspension Sub-frame

Effective with shipments November 2012

Please Note:

SAF-HOLLAND has added a series of holes to each sub-frame crossmember of our UltraLite mechanical slider suspension. These holes have been added to make for easier installation of various bolt-on component options (i.e. lightweight control boxes, ABS control boxes, etc.).

A total of 48 holes have been added to the crossmembers – (8) .44" diameter holes have been added to each crossmember horizontal flange (see detail A for hole locations), and (8) .38" diameter holes have been added to the rear vertical face of the front and middle crossmembers, and the front vertical face of the rear crossmember (see detail B for hole locations). These holes do not change the form, fit or function of the slider sub-frame.
