

Series Start to the new Trailer Disc Brake SAF SBS 2220 H0 from 01.04.2011

Reference Test Reports for the Homologation of the new trailer disc brake SAF SBS 2220 H0 for the suspension system SAF INTRADISC plus INTEGRAL

As vehicle manufacturer you are able to process a type approval for the brake system in connection with a vehicle. A reference vehicle must be presented to and tested by a test organisation as a representative for all vehicles of the same type. After which the type approval is given.

This comparatively simple process has proved itself to be a particularly time and cost intensive procedure.

SAF-HOLLAND would like to help you specifically by providing you the type approval for the new SAF trailer disc brake SBS 2220 H0 Type 0 Reference Test Report. We have commissioned the following five well-known European test organisations with the standard procedure to practical tests of the SAF trailer disc brake SBS 2220 H0: AIB-VINCOTTE (Belgium), IDIADA (Spain), INTA (Spain), RDW (Netherlands), TÜV Nord (Germany) und TÜV Süd (Germany).

Figure 1: SAF SBS 2220 H0

The results of these comprehensive tests are reference test reports which you, as a vehicle manufacturer, can obtain free from SAF-HOLLAND. The reference test reports can be used for most of the vehicles with 9 tonne capacity, so that in particular cases some parts of the required practical tests may not be necessary. Please refer to your corresponding test organisation for details.

This can lead to simplification of the necessary approvals and significantly reduce costs.

The reference test reports for the SAF trailer disc brake SBS 2220 H0 are now available online under: <http://testreport.safholland.de>

The use of the documents requires an authorisation from SAF-HOLLAND, which will be granted after registration.
