## General information

Realized updates of this version to INTRA 2020-01 .....	2
Designation on type plate and serialnumber .....	5
Identify spare parts securely via NFC .....	6
Type identification for suspension: INTRADISC <i>plus</i> INTEGRAL and INTRADRUM .....	7
Type identification for axle generation 06.....	7
Key.....	8
Overview of ride heights and weights for INTRA suspension .....	9
rigid axles .....	9
self-steering axles (BILL9-...) .....	12

## Air suspension types

Air suspension type IU with air spring 2619V (33) .....	15
Air suspension type IU with air spring 2919V (42) .....	15
Air suspension type IU with air spring 2924V (41) .....	16
Air suspension type IU with air spring 2927V (47) .....	16
Air suspension type IU with air spring 2626V (39) .....	17
Air suspension type IU with air spring 2927VK (58).....	17
Air suspension type Intra „MEGA“ with air spring 2927V (47).....	18
Air suspension type IO with air spring 2619V (33) .....	19
Air suspension type IO with air spring 2919V (42) .....	19
Air suspension type IO with air spring 2924V (41) .....	20
Air suspension type IO with air spring 2927V (47) <sup>1)</sup> .....	20
Trailing arm in pavers serie IO; only CD-Version .....	21
with air spring 2626V (39) .....	21
with air spring 2927VK (58).....	21

## Axle versions

Axle version BI9-19.: .....	22
Axle version BI9-22.: .....	23
Axle version BILL9-19. with Intra Standard: .....	24
Axle version BIL9-19. with Intra CD .....	25
Axle version BILL9-22...with Intra Standard .....	26
Axle version BIL9-22...with Intra CD .....	27
Achsversion BIM9:.....	28
Axle version S9-3718: .....	29
Axle version S9-4218: .....	30
Axle version SL9-4218: .....	31
Examples of axle versions with brake caliper rotated upwards:.....	32

## Assembly components

Geometry hanger bracket „steel“ .....	33
Geometry hanger bracket „steel“ – „screw-on“ .....	34
Geometry cross member, rigid axle .....	35
Geometry cross member, steering axle .....	36
Adjustable pivot bolt for hanger bracket „steel“ and „cross member“ .....	37
Shock absorber assembly: .....	38
Geometry hanger bracket „aluminium“ .....	39
Adjustable pivot bolt for hanger bracket „aluminium“ .....	40
Shock absorber assembly: hanger bracket „aluminium“ .....	41
Shock absorber overview .....	42
Air spring overview .....	43
Air spring for train loading.....	44
Calculation of clearance between tire and air spring.....	46
Calculation of the air spring pressure.....	47
Force-pressure-diagram .....	48
Air spring fixing / trailing arm – air spring .....	51

## Assembly components

Custom Design Version.....	51
Overview air spring brackets .....	52
Surface treatment of SAF-HOLLAND components .....	53

## Axle lift

Two sided axle lift .....	54
One-side axle lift.....	61

## Installation and welding instructions

Welding instruction for hanger bracket „steel“ .....	64
Welding instruction for hanger bracket „aluminium“ .....	64
Recommendation for lateral reinforcement of hanger bracket „steel“ .....	66
Welding recommendation for air spring bracket.....	67
Installation of hanger brackets „screw-on“ .....	68
Tightening torques.....	69
Tightening instructions for adjustable pivot bolt .....	70
Wheel fixing – standard, wheel size 19,5”/22,5“, disc brake (code 48).....	71
Wheel fixing – aluminium, wheel size 19,5”/22,5“, disc brake (code 49) .....	72
Wheel fixing – standard, wheel size 22,5“, drum brake (code 58) .....	73

## Brake chamber

Brake chamber bracket .....	74
Overview SAF-HOLLAND brake chambers .....	75

## Self-steering axle

Self-steering axle with stabilising damper .....	77
Caster.....	78
Steering angle.....	78

## Settings axle, suspension

Adjustment of the air suspension ride height .....	79
Ride heights.....	80
Semi-trailer tilt angle .....	80
Axle alignment .....	81
Positive toe-in/ toe-out: .....	82
Camber: .....	82

## Miscellaneous

Overview of exciter ring to the different axle versions.....	83
Installation instruction, ABS cable SAF INTRADISC <i>plus INTEGRAL</i> .....	84
rigid axle.....	84
self-steering axle .....	85
Installation instruction, ABS cable INTRADRUM .....	86
Installation instruction, connecting cable kit for pad wear sensing.....	87
on SAF calliper.....	87
on SAF calliper.....	88
on KNORR calliper.....	89
Installation instruction cover Plate .....	91
SAF TIRE PILOT I.Q.: .....	92
Recommendation for the technical requirement on the SAF INTRA CD TRAK.....	93

## Designation on type plate and serialnumber

The data on the type plate is confirm the regulation for checking and homologating the brake systems (by ECE R 13). The identification of the test equivalent and the applicability areas of the test report is now described with the following four identifiers:

- ID 1 identifies the axle
- ID 2 identifies the brake
- ID 3 identifies the test axle load
- ID 4 identifies the test report number

### The QR code

With a QR Code Reader and an internet access on a smart phone, tablet PC or with the (free of charge) SAF-HOLLAND app, you can scan the data on the type plate. The QR Code will guide you to the spare parts list of the scanned axle. The needed parts can than directly being ordered of the spare parts list free of failure.

In the SAF-HOLLAND app you will find a QR-code scanner installed for a quick and failure free ordering. The SAF-HOLLAND app can be downloaded from the Apple Store or Google Play Store.

### Example type plate

With Identifiers:

SAF-HOLLAND GMBH D-63856 BESENBACH · GERMANY			
Version	S9 – 4218	ID1 – SNK4218 – 11S	
Serial No.	11 12 194 0155	ID2 – SNK420X180	
Ident No.	247 90 66 2 59 3	ID3 – 10791	
Stat. 9000kg Vmax105km/h		ID4 – TDB0381	
Made in Germany	E		
		SN 11121940155	

The serial number appears as follows:

**XX JJ TTT NNNN**

**XX**..... - Place of manufacture:

**JJ**..... - Year of manufacturing

**TTT**..... - Day of manufacturing

**NNNN**.... - Running number per day, year and place

Example serial number: **11 12 194 0155**

This is about the **155**th product of the **194**th manufacturing day at the manufacturing year **2012** from the **manufacturing plant 11**.

## Identify spare parts securely via NFC

Your smartphone as a workshop assistant.

Hold it up. Scan. Identify spare parts.

Here you will find the video with the corresponding instructions

1

Open the „SH-Connect“ app on your smartphone.

2

Scan the hubcap to identify the trailer axle.

3

You will now see the details of the trailer axle, allowing you to easily order your spare parts in the POD or Knowledge Portal.

**Simple and quick identification** of the trailer axle (no need to crawl under the trailer to identify the nameplate anymore)

The parameters of the identified product (product image, product category, serial number, product type, etc.) can be shared via a **“Share” function from the app through various channels** (email, WhatsApp, SMS, etc.)

**The search for suitable literature is significantly simplified**, as the information is customized to the specific product.

The more efficient search for literature and spare parts allows workshops **to save time, resulting in cost savings for the end customer or fleet.**

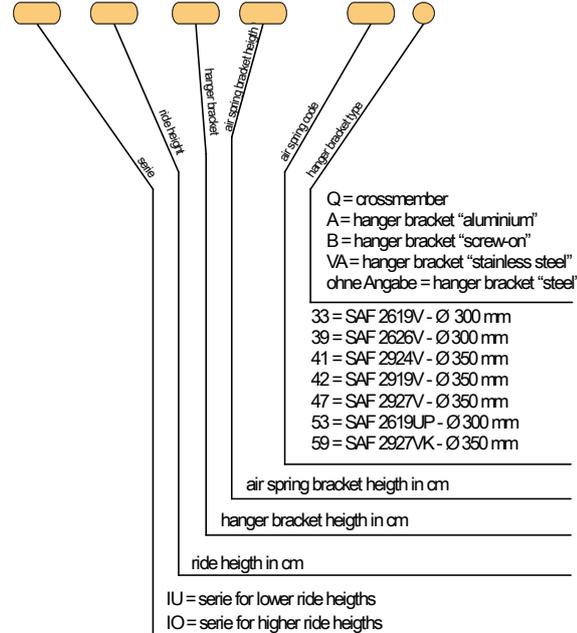

**The search for the right spare part is made easier** as it is based on the serial number level (similar to the existing QR code on the nameplate)

## Type identification for suspension: INTRADISC *plus* INTEGRAL and INTRADRUM

Letters are marked with "X", numbers with "0"  
 Example:

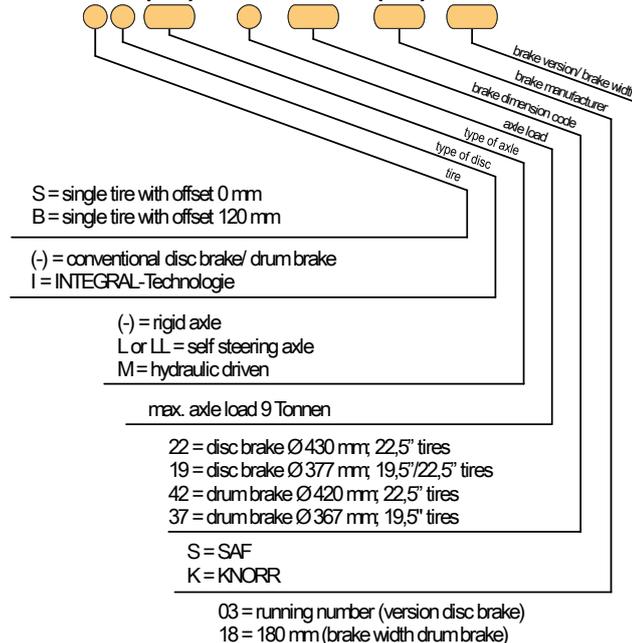

IU28 / 2005 33Q  
 IO44 / 3000 41  
 XX00 / 0000 00X

## Type identification for axle generation 06

Letters are with "X", numbers with "0"  
 Example:

S 9-42 18  
 BI L 9-22 S 03  
 XX(X) 9-00 (X)00

## Key

Summary	Explanation
<b>A</b>	Unsprung mass
<b>AX</b>	Distance wheel attachment faces left to right
<b>B</b>	Total width
<b>BH</b>	Hanger bracket height, distance centre pivot bolt to top side hanger bracket
<b>BL</b>	Hanger bracket length, distance top hanger bracket from front- to backside
<b>BM</b>	Air spring centre, distance air spring centre line between left- and right side
<b>ET</b>	Offset, distance wheel attachment face to centre tire
<b>DP</b>	Pivot point centre (steering axle), distance pivot bolts centre line between left- and right side
<b>F</b>	Nominal ride height, distance centre axle to bottom chassis in driving condition
<b>G</b>	Total axle width
<b>H</b>	Air spring bracket height
<b>H<sub>2</sub></b>	Air spring bracket height at lift air spring
<b>HM</b>	Hanger bracket centre, distance hanger bracket centre line between left- and right side
<b>Hmax</b>	Air spring height maximum
<b>Hmin</b>	Air spring height minimum
<b>I</b>	Ratio
<b>K</b>	Brake chamber centre (with drum brake), centre distance brake chamber bracket between left- and right side
<b>KTL</b>	Cathodic dip coating
<b>L</b>	Trailing arm length (L1), distance centre pivot bolt to centre axle (standard 500 mm)
<b>La</b>	Distance centre axle to centre air spring (L2, standard 385 mm)
<b>LM</b>	Spring centre, centre distance spring between left- and rightside
<b>Lmax</b>	Shock absorber length maximum
<b>Lmin</b>	Shock absorber length minimum
<b>P</b>	Air pressure in the air spring (Mpa)
<b>p</b>	Air pressure in the air spring (Mpa/kg)
<b>Pt</b>	Air pressure in the air spring at partial load (Mpa)
<b>Q</b>	Axle load on the ground (kg)
<b>Qt</b>	Axle load on the ground at partial load (kg)
<b>S</b>	Track, centre distance tires between left- and right side
<b>V</b>	Air spring offset, distance centre air spring to centre spring
<b>X</b>	Overall height, distance centre axle to under side of chassis beam when air springs are without air
<b>Y</b>	Installation height of liftarm, when raised.

All measurements are given in mm if not specified otherwise.

## Overview of ride heights and weights for INTRA suspension rigid axles

air spring type 2619 V (code: **33**), total axle travel **180** mm

air suspension type	ride height range [mm]	hanger bracket [mm]	air spring bracket [mm]	weight <sup>1)</sup> [kg]

- 1) Weight deviations lie within the permitted DIN tolerances for the respective manufacturing process. Weight when track/spring centre 2040/1300 with steel hanger brackets, without wheel nuts.
- 2) Axle version with SAF-HOLLAND brake calliper (SBS2220) and with SAF-HOLLAND brake calliper (SBS2219 K1).
- 3) Axle version with SAF-HOLLAND brake calliper (SBS1918); with KNORR brake calliper (SB6...ST6) an additional weight of 5 kg per axle needs to be accounted for.

**Further variants on request.**

## Overview of ride heights and weights for INTRA suspensions self-steering axles (BILL9-...)

### Important:

The ride height range for self-steering axles is depending on the resulting caster. Because of this caster, not every ride height range as with the rigid axle can be covered. See also page 78, [Caster](#).

air spring type 2619 V (code: **33**), total axle travel **180** mm

- 1) Weight deviations lie within the permitted DIN tolerances for the respective manufacturing process. Weight when track/spring centre 2040/1300 with steel hanger brackets, without wheel nuts.
- 2) Axle version with SAF-HOLLAND brake calliper (SBS2220) and with SAF-HOLLAND brake calliper (SBS2219 K1).
- 3) Axle version with SAF-HOLLAND brake calliper (SBS1918); with KNORR brake calliper (SB6...ST6) an additional weight of 5 kg per axle needs to be accounted for.
- 4) The extra weight for the axle version with B(I)L in stead of B(I)LL is about 24 kg.

**Further variants on request.**

**Axle version BIL9-22...with Intra CD**

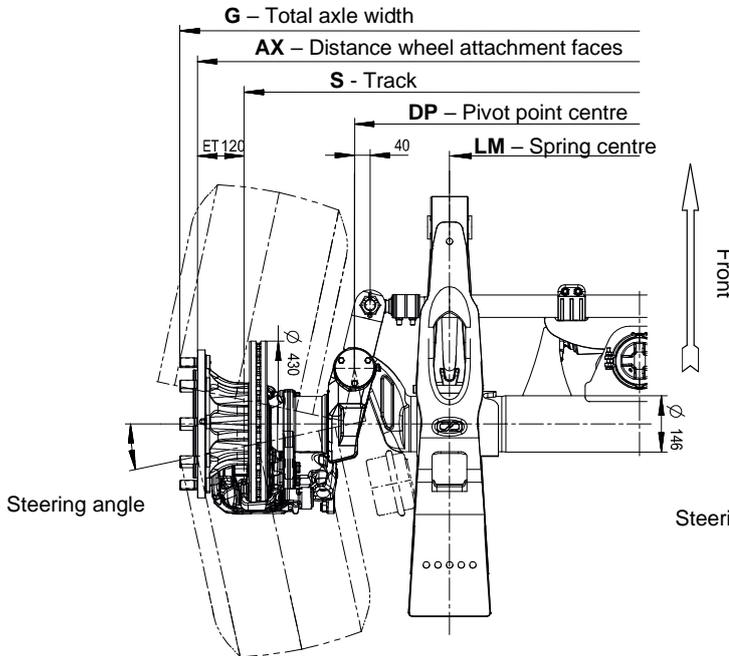

Axle load maximum: **9.000 kg**

Wheel fixing: **10 / 280 / 335 / 22x1,5 mm**

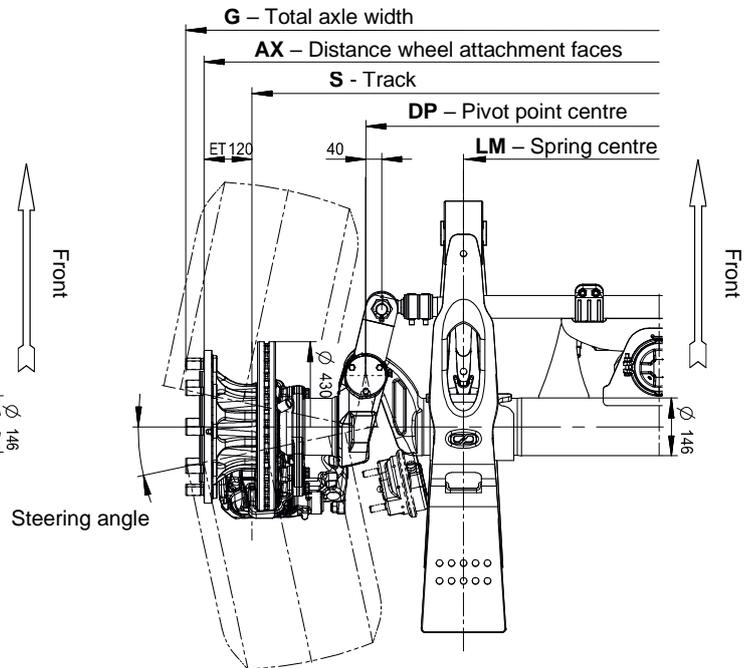

Suitable for air springs with diameter  $\varnothing$  **300 mm** and  $\varnothing$  **350 mm**

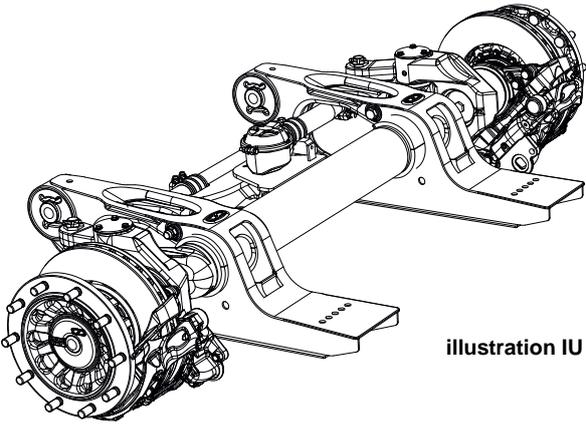

Steering angles up to max. 20°, depending on track, spring centre, tire size and other components.

**IU**

**IO**

### Air spring overview

Description	Article number - code:	Top view	Bottom view
2619V H <sub>min</sub> = 190 mm H <sub>max</sub> = 560 mm Ø 300 mm Plastic piston	3 228 1033 00 - <b>33</b>		
2626V H <sub>min</sub> = 260 mm H <sub>max</sub> = 630 mm Ø 300 mm Plastic piston	3 228 1039 00 - <b>39</b>		
2919V H <sub>min</sub> = 190 mm H <sub>max</sub> = 560 mm Ø 350 mm Plastic piston	3 228 1042 00 - <b>42</b>		
2927VK H <sub>min</sub> = 270 mm H <sub>max</sub> = 630 mm Ø 350 mm Plastic piston	3 228 1058 00 - <b>58</b>		
2924V H <sub>min</sub> = 230 mm H <sub>max</sub> = 675 mm Ø 350 mm Plastic piston	3 228 1041 00 - <b>41</b>		
2927V H <sub>min</sub> = 250 mm H <sub>max</sub> = 795 mm Ø 350 mm Plastic piston	3 228 1047 00 - <b>47</b>		

All air springs with a maximum diameter of Ø 350 mm are also available with a steel piston, except for the 2927VK (58) air spring.

## Air spring for train loading

With the new SAF UP train loading system (air spring type 2619 UP) we offer the opportunity to operate the air suspension system for train loading without any extra parts.

Trailer operation:

driving condition

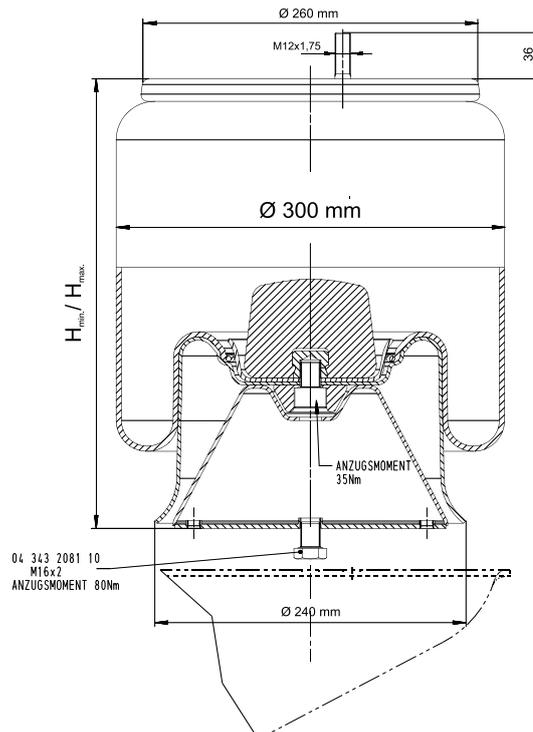

rail loading

In driving condition, an optimal load transmission occurs between the air spring and the trailing arm through the specially-designed support brackets at the interface points

When rail loading, the axle sinks down and is held by the shock absorber with bump stop. When the trailer is set down, the bellows and support brackets are joined again automatically and without creases.

Description	Article number - code:	Top view	Bottom view
2619UP Hmin = 190 mm Hmax = 560 mm Ø 300 mm Piston and support bracket	3 228 1053 00 - <b>53</b>		

The use of the SAF 2619 UP air spring can only be in combination with the right shock absorber length to the used air suspension type. For air suspension types with air spring 2619 UP instead of 2619V, an additional weight of 6 kg per axle needs to be accounted for.

Overview table with classification to air suspension type with air SAF 2619 UP, code 53:

Further variants on request.

## Calculation of clearance between tire and air spring

The calculated clearance is the distance between tire and air spring. This must be at least **25 mm**.

Calculation formula: 

$$\text{Clearance} = \frac{AX - LM - \text{air bag diameter} - \text{tyre width}}{2} + V - ET$$

Example 1:

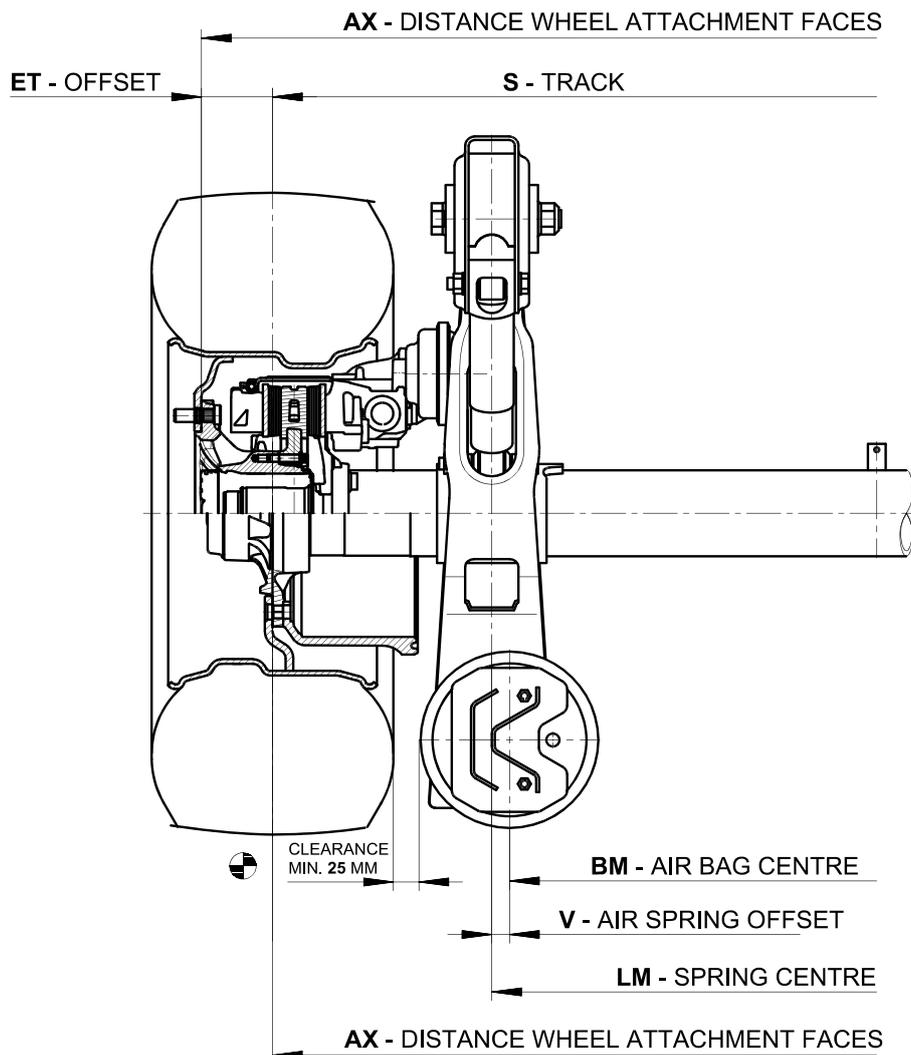

IO35/2000 33 S9-4218  
 distance wheel attachment faces: 2040 mm  
 spring centre 1300 mm  
 air spring diameter 300 mm  
 mounted tire 385/65R22,5"  
 (E.T.R.T.O Norm 405 mm)  
 air spring offset 30 mm  
 offset 0 mm

$$\frac{2040 - 1300 - 300 - 405}{2} + 30 - 0 = 47,5 \text{ mm}$$

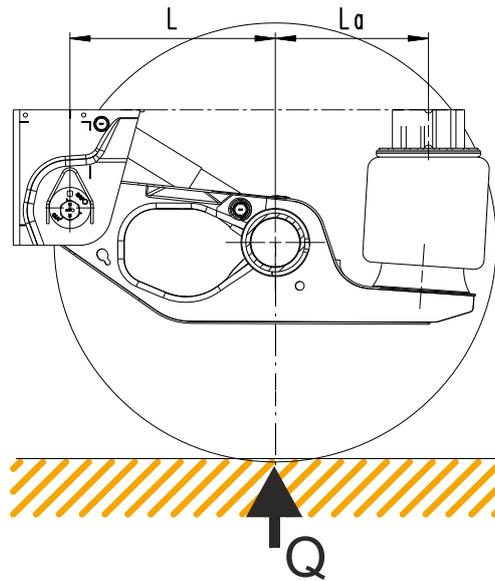

Example 2:

IU34/2505 41 BI9-19S  
 distance wheel attachment faces: 2330 mm  
 spring center 1300 mm  
 air spring diameter 350 mm  
 mounted tire 425/55R19,5"  
 (E.T.R.T.O Norm 438 mm)  
 air spring offset 30 mm  
 offset 120 mm

$$\frac{2330 - 1300 - 350 - 438}{2} + 30 - 120 = 31 \text{ mm}$$

## Calculation of the air spring pressure

**Formula to calculate the air pressure when fully laden:**

$$P = \frac{(Q - A) \cdot i \cdot p}{2} \cdot 10^5 \text{ Pa} \quad (1 \text{ bar} = 10^5 \text{ N/m}^2 = 10^5 \text{ Pa} = 0,1 \text{ MPa})$$

P = air pressure in the air spring [ Pa ]

Q = permissible axle load on the ground [ kg ]

A = unsprung mass [ kg ]

i = ratio

$$i = \frac{L}{L + La}$$

p = air pressure in the air spring per kg load

air spring Ø 300mm (SAF 2619V / SAF 2626V)

air spring Ø 350mm (SAF 2919V / 2927VK / 2924V / 2927V)

p = 0,00244 \* 10<sup>5</sup> Pa/kg

p = 0,00187 \* 10<sup>5</sup> Pa/kg

Example with air suspension type IU30/2505 33 (air spring SAF 2619V)

Q = 9000 kg,

A = 750 kg

L = 500 mm , La = 385 mm

$$i = \frac{500}{500 + 385} = 0,565$$

p = 0,00244 \* 10<sup>5</sup> Pa/kg

$$P = \frac{(9000 - 750) \cdot 0,565 \cdot 0,00244}{2} \cdot 10^5 \text{ Pa}$$

**P = 5,69 \* 10<sup>5</sup> Pa**

**Formula to calculate the air pressure when partially loaded:**

$$P_t = \frac{(Q_t - A) \cdot i \cdot p}{2} \cdot 10^5 \text{ Pa}$$

Q<sub>t</sub> = axle load on the ground when partially loaded

Example with air suspension type IU30/2505 33 (air spring SAF 2619V)

Q<sub>t</sub> = 2100 kg,

A = 750 kg

L = 500 mm , La = 385 mm

$$i = \frac{500}{500 + 385} = 0,565$$

p = 0,00244 \* 10<sup>5</sup> Pa/kg

$$P_t = \frac{(2100 - 750) \cdot 0,565 \cdot 0,00244}{2} \cdot 10^5 \text{ Pa}$$

**P<sub>t</sub> = 0,93 \* 10<sup>5</sup> Pa**

## Force-pressure-diagram

The shown air pressure line in the diagramm (force-pressure-diagramm) shows the force-pressure-values of an ideal adjusted air suspension.

This can be influenced as follow:

- Utilization of the total ride height range, thereby changing the ratio  $i$  and the air spring length
- Anomaly of the real unsprung mass caused by different suspension types, wheels and tires
- Anomaly of the effective area of the air spring caused by the angled position (depending on the air suspension type)

Therefore we recommend, when adjusting the EBS – installation (e.g. HALDEX EBS), an inspection to compare both values (theoretically and measured) to achieve an optimized utilization of suspension- and brake-characteristics.

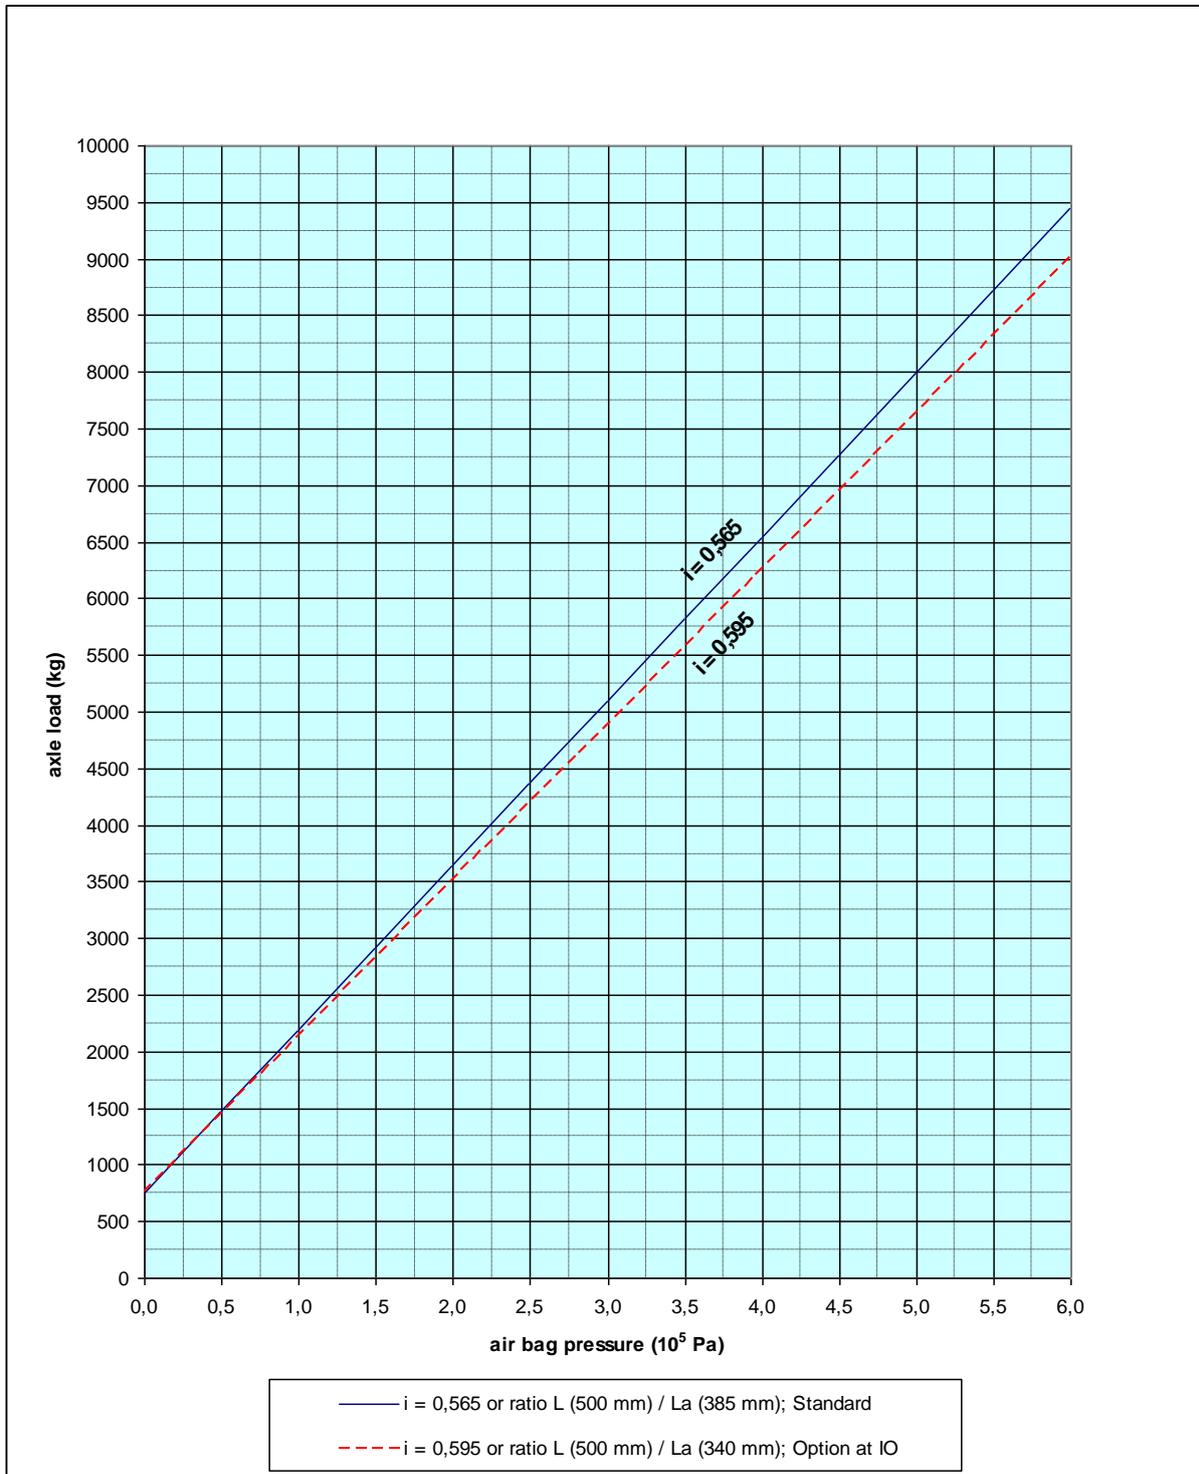

Possible inspection method:

1. position trailer on even ground
2. connect the air pressure gauge to the test-outlet of the carrying air spring
3. measurement to be done with unladen trailer
4. put the, to be measured axle, on a scale
5. measure the weight of the axle
6. read out of the air pressure in the air spring
7. compare the measured values with the values at the force-pressure diagram
8. if necessary EBS values needs re-adjusting to the measured values
9. conduct measurement with a partial- and full-load
10. repeat steps 4 – 8 for all carrying air springs

It is assumed that all measuring instruments are calibrated

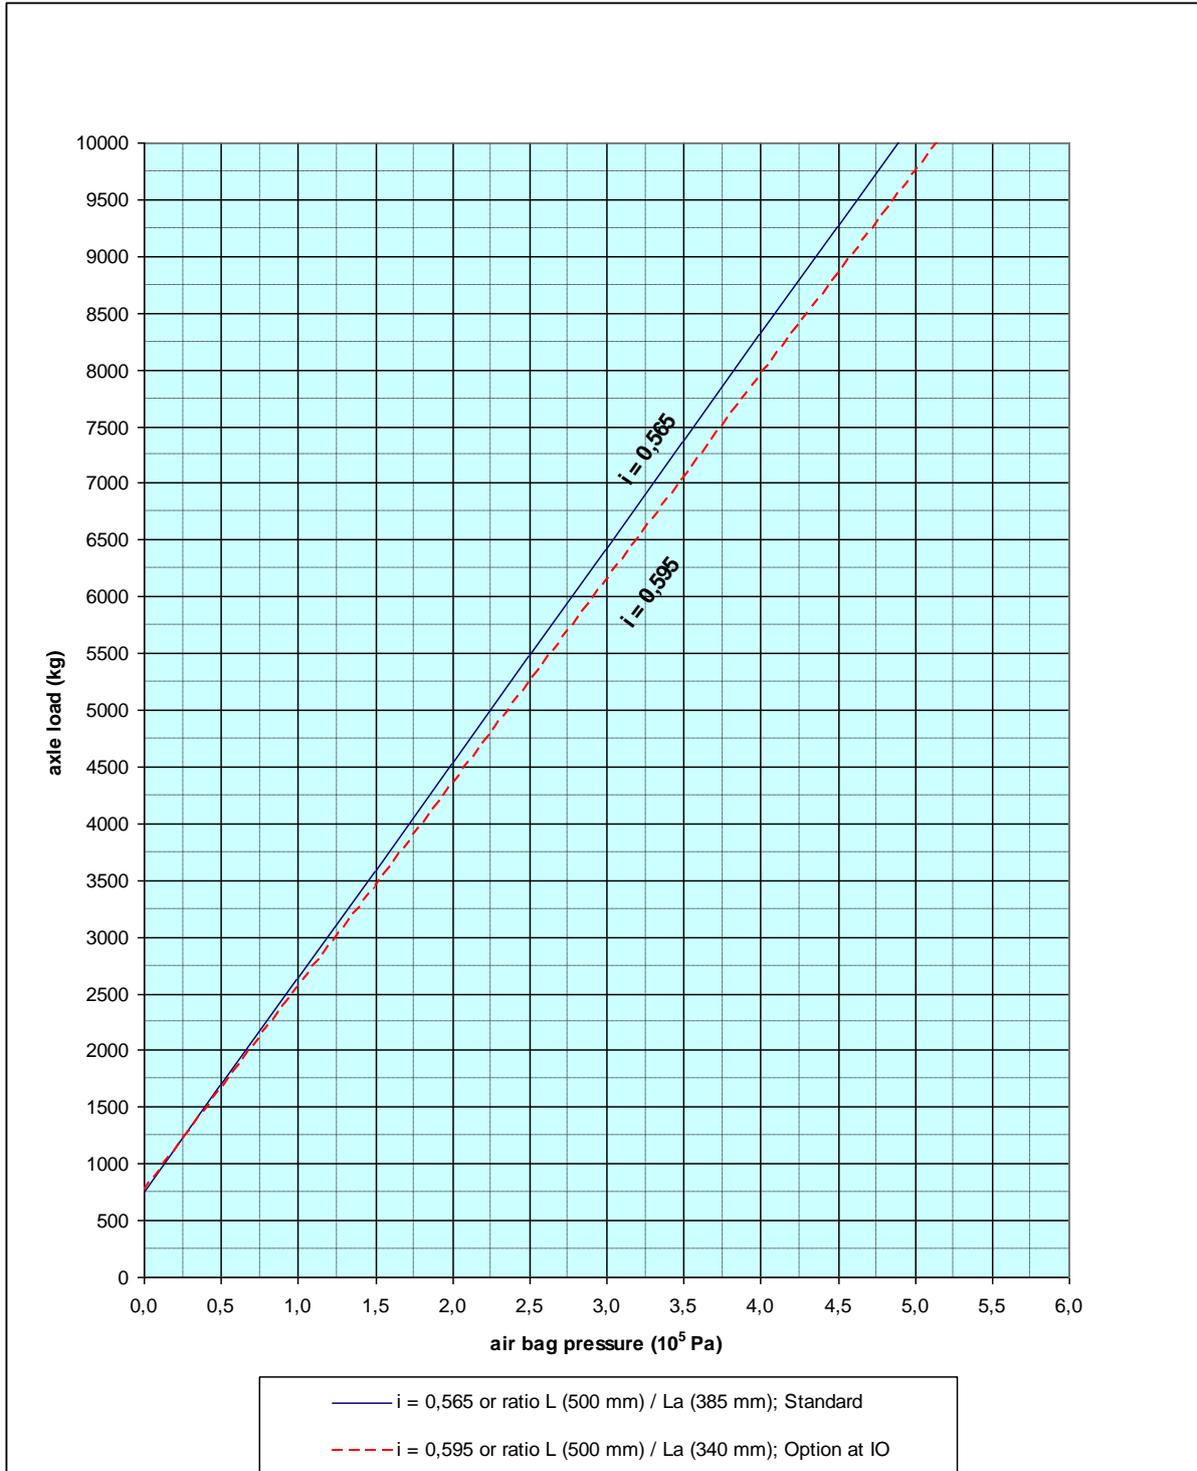

### Force-pressure-diagram for air spring with diameter 300 mm

**Air spring: SAF 2619V (33)  
SAF 2626V (39)  
SAF 2619UP (53)**

### Force-pressure-diagram for air spring with diameter 350 mm

## Air spring fixing / trailing arm – air spring

### trailing arm IU

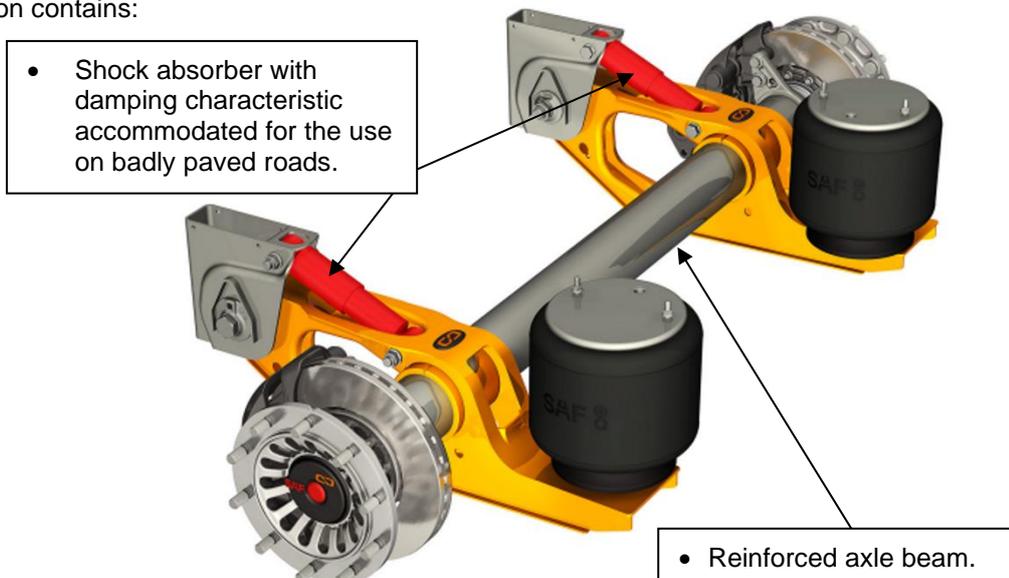

### trailing arm IO

## Custom Design Version

The INTRADISC *plus INTEGRAL* or INTRADRUM air suspension are also available as reinforced version named CD version. This version is preferably used for heavy application, for example off-road, and for trailers with torsionally stiff bodies as in tippers, pavers, tipping silo- and moving floor trailers, furthermore for trailers, which come to be used out of the “geographical” areas as named in our Guaranty of Competence.

The CD version contains:

The additional weight to the standard version is about 10 kg for rigid axles and for self-steering axles (B(I)L9..) about 24 kg

## Overview air spring brackets

Standard air spring bracket „steel“

article number:		H [mm]

2 237 0080 01	2 237 0080 91	100
2 237 0082 01	2 237 0082 91	150

air spring bracket „steel“ – screw-on

article number:	H [mm]		
2 237 1081 01	55		
2 237 1080 01	105		
2 237 1082 01	155		

	at V:	at position .. and / or ..
		0
	30	3 / 7
	55	4 / 2
	60	5 / 2

example V = 30, pos. 3 and 7.

## Surface treatment of SAF-HOLLAND components

### Corrosion protection of SAF-HOLLAND products:

To achieve an ideal corrosion protection on SAF-HOLLAND products, we use the following different coating methods:

Cathodic dip coating (KTL)	Cathodic dip coating (KTL) thin layer
<b>Features:</b>	
<ul style="list-style-type: none"> <li>• Complete corrosion protection in all areas of the component</li> <li>• High surface hardness with uniform coat thickness</li> <li>• Recoatable with all single-component or 2-component topcoats</li> </ul>	
<ul style="list-style-type: none"> <li>• Coat thickness is max. <b>45µm</b></li> </ul>	<ul style="list-style-type: none"> <li>• Coat thickness is max. <b>20µm</b></li> </ul>
<ul style="list-style-type: none"> <li>• Min. <b>504 h</b> salt spray test according to DIN EN ISO 9227</li> </ul>	<ul style="list-style-type: none"> <li>• Min. <b>200 h</b> salt spray test according to DIN EN ISO 9227</li> </ul>
<b>Application example:</b>	
<ul style="list-style-type: none"> <li>• trailing arm, axle beam</li> </ul>	<ul style="list-style-type: none"> <li>• wheelhub</li> </ul>

### Dip coating:

Features:

- Complete corrosion protection in all areas of the component.
- Recoatable with all single-component or 2-component top coats.
- Coat thickness is max. **30 µm**.
- Min. **100 h**. salt spray test according to DIN EN ISO 9227.

Application example: hanger bracket

### Zinc-flake coating (Cr(VI)-free types):

Features:

- High quality corrosion protection for threaded fastening elements.
- Suitable for high-strength bolting elements.
- Adjustable friction coefficient for a reliable screwing process.
- Min. **480 h**. salt spray test according to DIN EN ISO 9227.

Application example: pivot bolt mounting, disc brake mounting.

### Premium Coated:

Features:

- Additional powder coating for extended corrosion protection.
- Ideal mechanical properties and excellent chemical resistance.
- 10-year warranty against perforation corrosion.
- The ability to recoat remain unaffected.
- Color code of the Premium Coated axles is **DB703** (iron glimmer metallic)
- Coating thickness max. **350µm**.
- Min. **2000 h** salt spray test according to **DIN EN ISO 9227**.

Application example: rigid axles INTRADISC, INTRADRUM, self-steering axles INTRADISC

### Recommendation for users:

- In principle, dip coating can be welded over. SAF-HOLLAND recommends, however, that these coats needs to be removed in the area of weld seams.
- All contact surfaces of the pivot bolts and shock absorbers bolts are not allowed to have additional primer or paint coatings.
- Wheel attachment faces are not allowed to be painted. The wheel attachment face must be clean and free of grease. In general the remarks of the wheel manufactures needs to be followed.

## Two sided axle lift

We recommend a minimum of 100 mm lift travel when setting the ride height.

- Not suitable for 19,5" tires due to insufficient ground clearance.
- Applications with "UP-airsprings" (53) available on request

### Calculation of clearance between lift air spring and tire

The clearance must be at least 25 mm.

Formula:

$$\frac{AX - LM - \text{max. tire width} - 270}{2} - ET = \text{clearance}$$

Example with: IU25/2000 33 BI9-22S

- distance wheel attachment faces: 2280 mm
- spring centre: 1300 mm
- tire width (max.): 405 mm  
(E.T.R.TO. Norm for tire size 385/65R22,5")
- lift air spring diameter max. 270 mm
- offset 120 mm

$$\frac{2280 - 1300 - 405 - 270}{2} - 120 = \text{clearance} = 32,5 > 25$$

### Versions for hanger bracket

Kitnumber:	application	Weight [kg per axle]
3 027 1292 00	for hanger bracket „steel“	20
3 027 1280 01	for hanger bracket „aluminum“	22

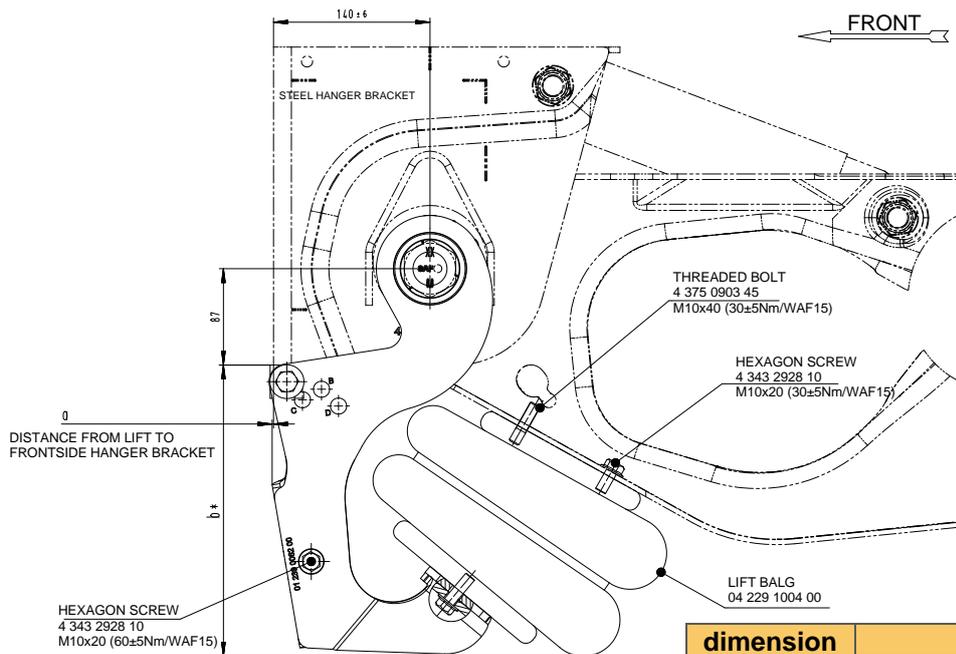

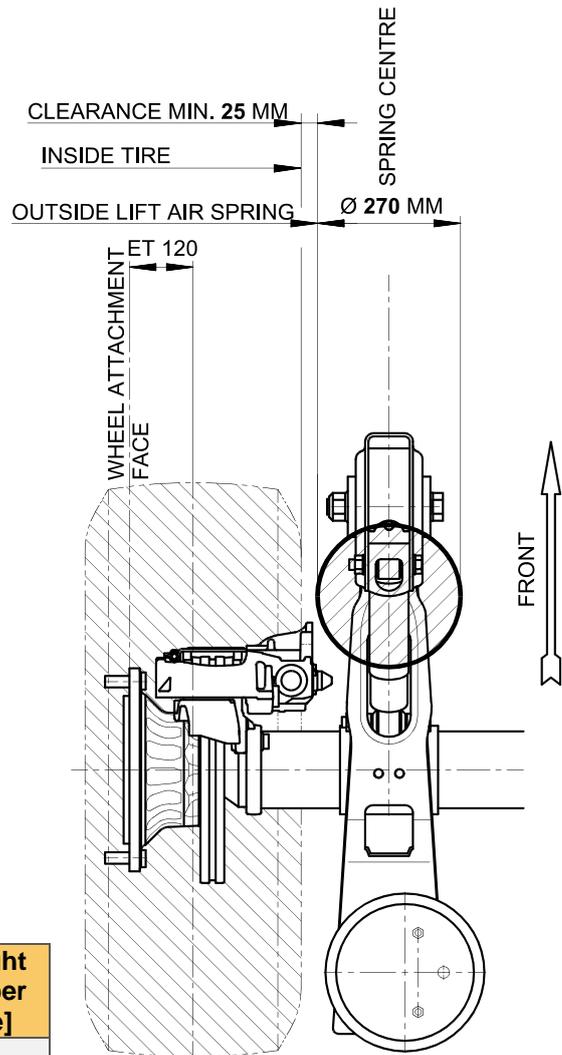

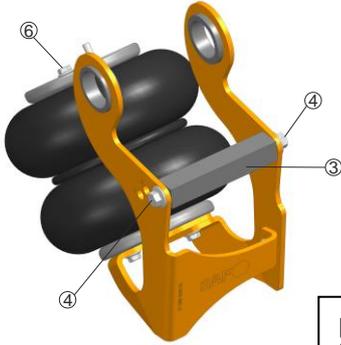

Illustration for hanger bracket "steel" – 3 027 1292 00

dimension [mm]	Position			
	A	B	C	D
a (±6mm)	5	15	30	55
b	270	280	285	290

## Installation instruction

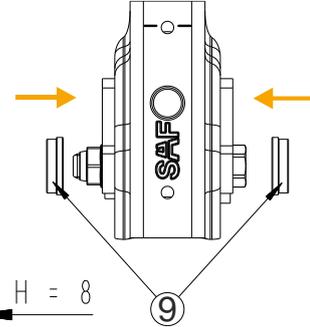

### Installation of the lift:

1. Demount support bar (3) with hexagon screws (4), and demount hexagon screw (6) on lift air bag .

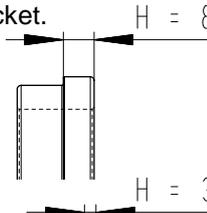

2. Remove cable straps. Slide one washer (9), over the nut against the thrust washer and one over the bolt head of the pivot bolt mounting against the eccentric washer.

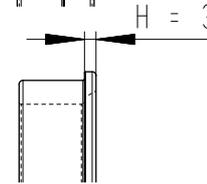

**Attention!** The shoulder of the washer is towards the sides of the hanger bracket.

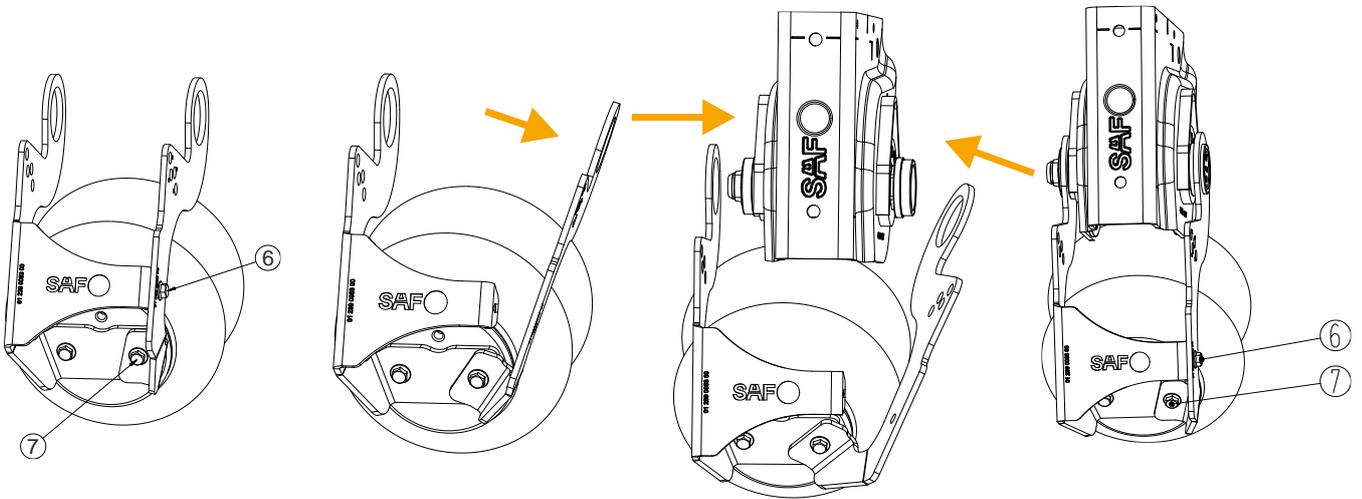

pivot bolt connection for **steel** hanger bracket only in combination with washer (9) **H=8**

pivot bolt connection for **aluminium** hanger bracket only in combination with washer (9) **H=3**

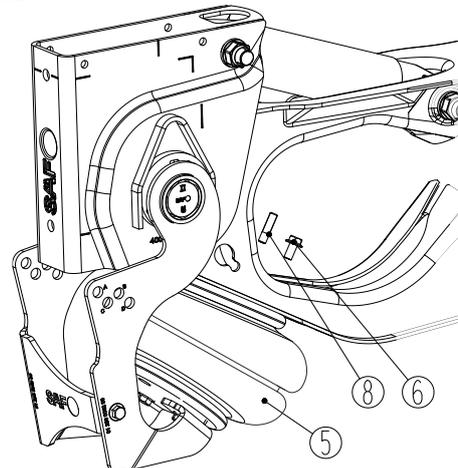

3. Demount hexagon screws (6), loosen up the hexagon screw (7), push the lift arm outwards and slide them over the washers (9).

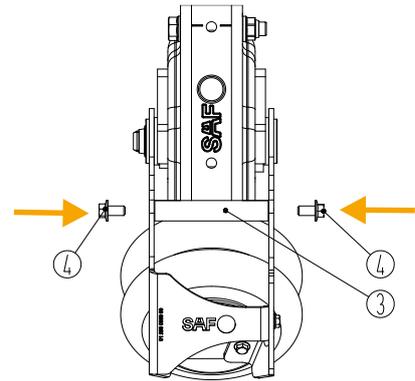

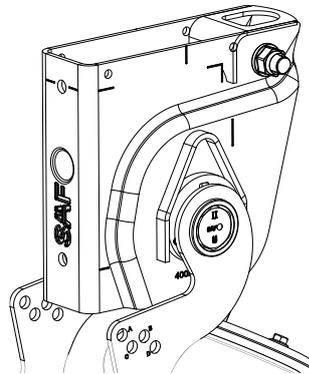

4. Tighten hexagon screw (6), **Tightening torque 60 Nm/ WAF15** and tighten hexagon screw (7), **Tightening torque 30 Nm/ WAF15**
5. Position the lift air bag (5) at the trailing arm by threaded bolt (8). And fixate by the hexagon screw (6) from the inside of the trailing arm. **Tightening torque 30 Nm/ WAF15**

**Attention!**

Because of the accessibility to the screw (6) please, consider the position of the brake chamber!  
If applicable, disassemble the brake chamber.

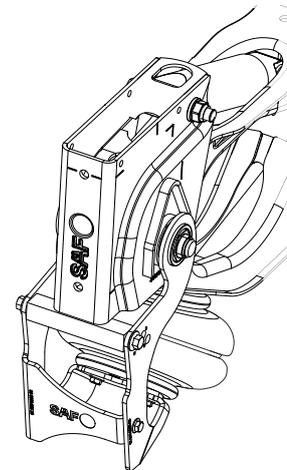

- Take the required position (**Pos.**) as described from the [Table](#). Mount the support bar (**3**) in a horizontal position against the bottom of the hanger bracket with the hexagon screws(**4**).  
**Tightening torque 120 Nm/ WAF18**

**Installation instruction**

- Positioning (Pos.)**  
 The lift needs to be adjusted to every air suspension type (combination of trailing arm, hanger bracket, air spring and air spring bracket). The adjustment is done by positioning the support bar between the lift arms. This position (**pos.**) can be taken out of the table below.
- Installation required space in front of the hanger bracket (a)**  
 Depending on the **pos.**, you'll find different sizes for the required space in front of the hanger bracket. These can be taken from the Table below (**a**). The +/- 6 (mm) need to be taken in consideration because of the adjusting of the pivot bearing (axle alignment).
- Ground clearance (b)**  
 Depending on the **pos.**, you'll find different sizes for the ground clearance. These values can be taken from the Table below (**b**).

Air suspension type	Pos.	a [mm]	b [mm]
IU25/2000 33/42	A	5 ±6	270

Washer		4 331 5029 01	(12)	2x
Thrust washer		1 101 2001 00	(4)	1x
Eccentric washer		1 123 0001 01	(3)	1x

### Installation instruction

#### Installation of the lift arm:

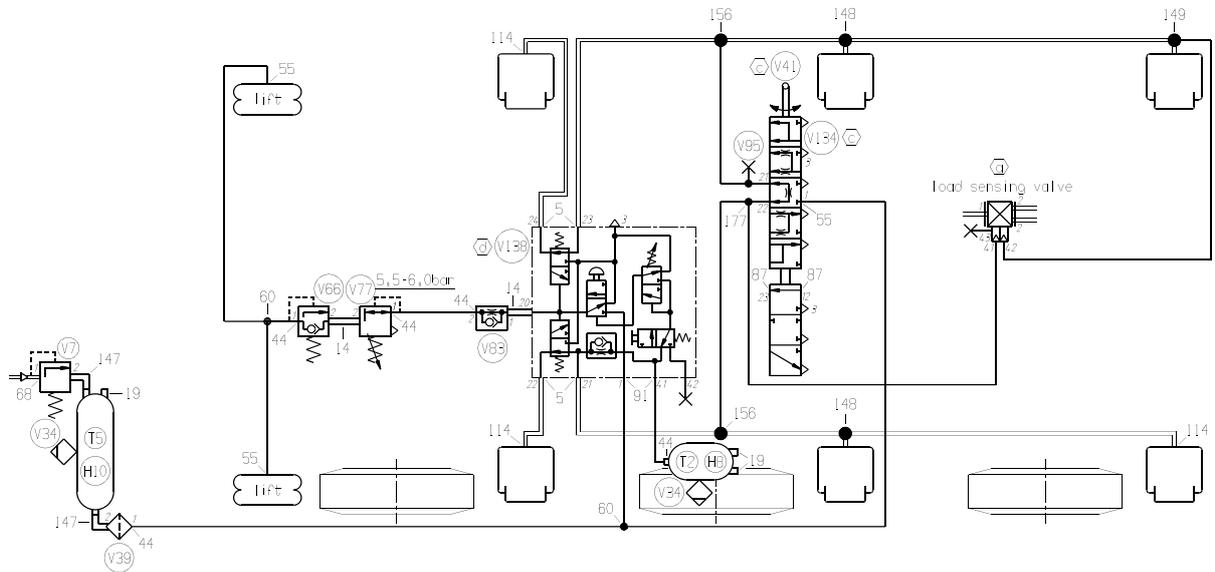

- ✓ Remove the existing pivot bolt mounting. Eccentric washer (3) and thrust washer (4) re-use.
- ✓ Position the lift arm (6) over the hanger bracket or cross member.
- ✓ Mount the pivot bolt according to the illustration. Use the hexagon screw (1), washers (2) and lock nut (5) new from the kit. Washers (3), (4) and (12) of the demounting.
- ✓ **Important: the pivot bolt must be tightened according to the SAF-HOLLAND torque regulations in the ride height. (400Nm + 120°, see page 70)**

#### Installation of the lift air spring:

- ✓ Fix the lift air spring (7) from underneath with two bolts enclosed (9) and washers (10) to the lift arm. **Tightening torque 50 Nm**
- ✓ The air connection of the lift air spring **must**, point downwards to the lift arm (6), as illustrated.
- ✓ Screw the threaded bolt (8) to the upper spring plate as illustrated (positioning nearest to the pivot bolt). **Tightening torque 25-30 Nm**
- ✓ Lift air spring (7) and protection plate (11) are locked by the threaded bolt (8) to the trailing arm. And fixed with bolt (9) as well as the washer (10) from the inner side of the trailing arm. **Tightening torque 50 Nm**

hexagon nut		4 247 4047 10			(10)	2x
washer		4 331 1004 00			(11)	1x

## Installation instruction

### Installation of the lift arm:

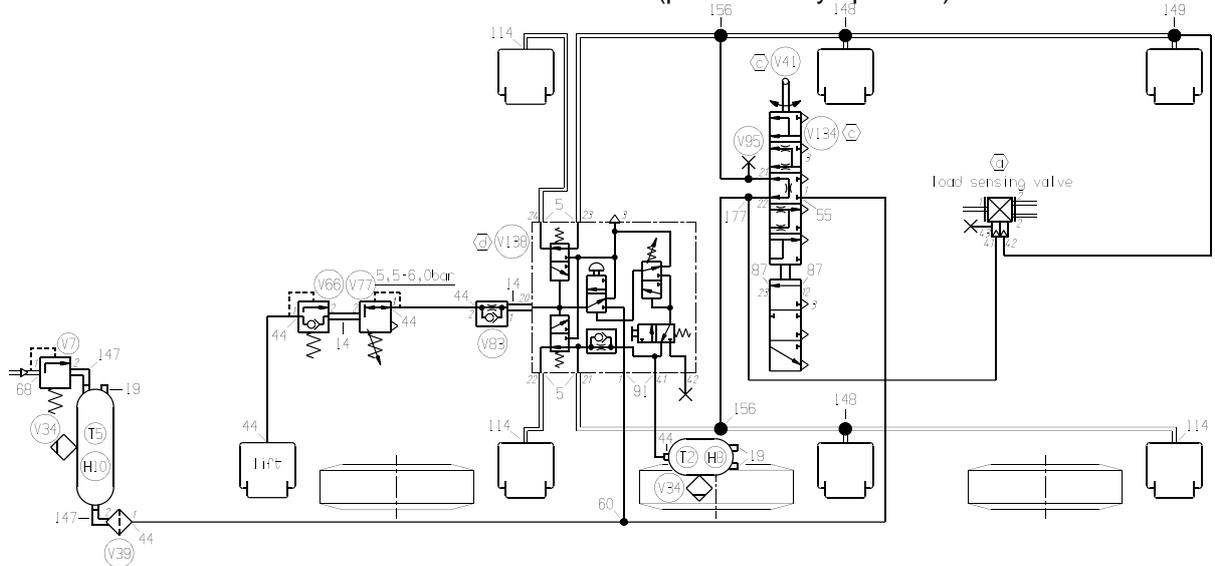

- ✓ Position the guide (2) in the gap in the trailing arm
- ✓ Place lift arm (1) in the guide (2) using bolt (4), nut (5), and washer (6) as in the illustration
- ✓ Fix the lift arm (1) to the under side of the trailing arm with bolt (8), washer (11) and nut (7). **Tightening torque 210Nm.**
- ✓ Tighten the assembly with bolt (4), **Tightening torque 400Nm.**

### Installation of the lift air spring:

- ✓ Fix the lift air spring bracket (9.1...9.4) to the chassis, see [Page 67](#)
- ✓ Screw lift air spring (3) with nut (7) to lift arm (1) **Tightening torque 80Nm**
- ✓ Screw the dowel pins of the air spring plate to the air spring bracket (9.1...9.4) using nut (10) **Tightening torque 40Nm**
- ✓ The air supply of the lift air spring (3) **must** lie in the cut out position of the lift air spring bracket (9.1...9.4) see illustration.

### Circuit diagram

## Welding instruction for hanger bracket „steel“

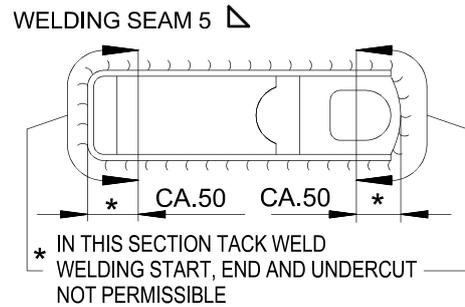

### Note

Cover the trailing arm to protect it from flying sparks. Welding and connecting the welding equipment ground cable to the trailing arm is not permissible. In order to avoid bearing damage, the welding equipment ground cable must also not be connected either to the wheel, wheelhub or wheelflange.

### Welding recommendation

The high tensile steel (in accordance with DIN EN 10025 (class 3) used for the hanger brackets with a carbon content C of max. 0,2 % can easily be welded.

SAF-HOLLAND is using the gas metal arc welding procedure with the additional material G4 Si 1 (previous designation SG 3) in accordance with DIN EN ISO 14341, shielding gas in accordance with DIN EN ISO 14175, welding seams to DIN EN ISO 5817 "quality levels for imperfections" to "group C".

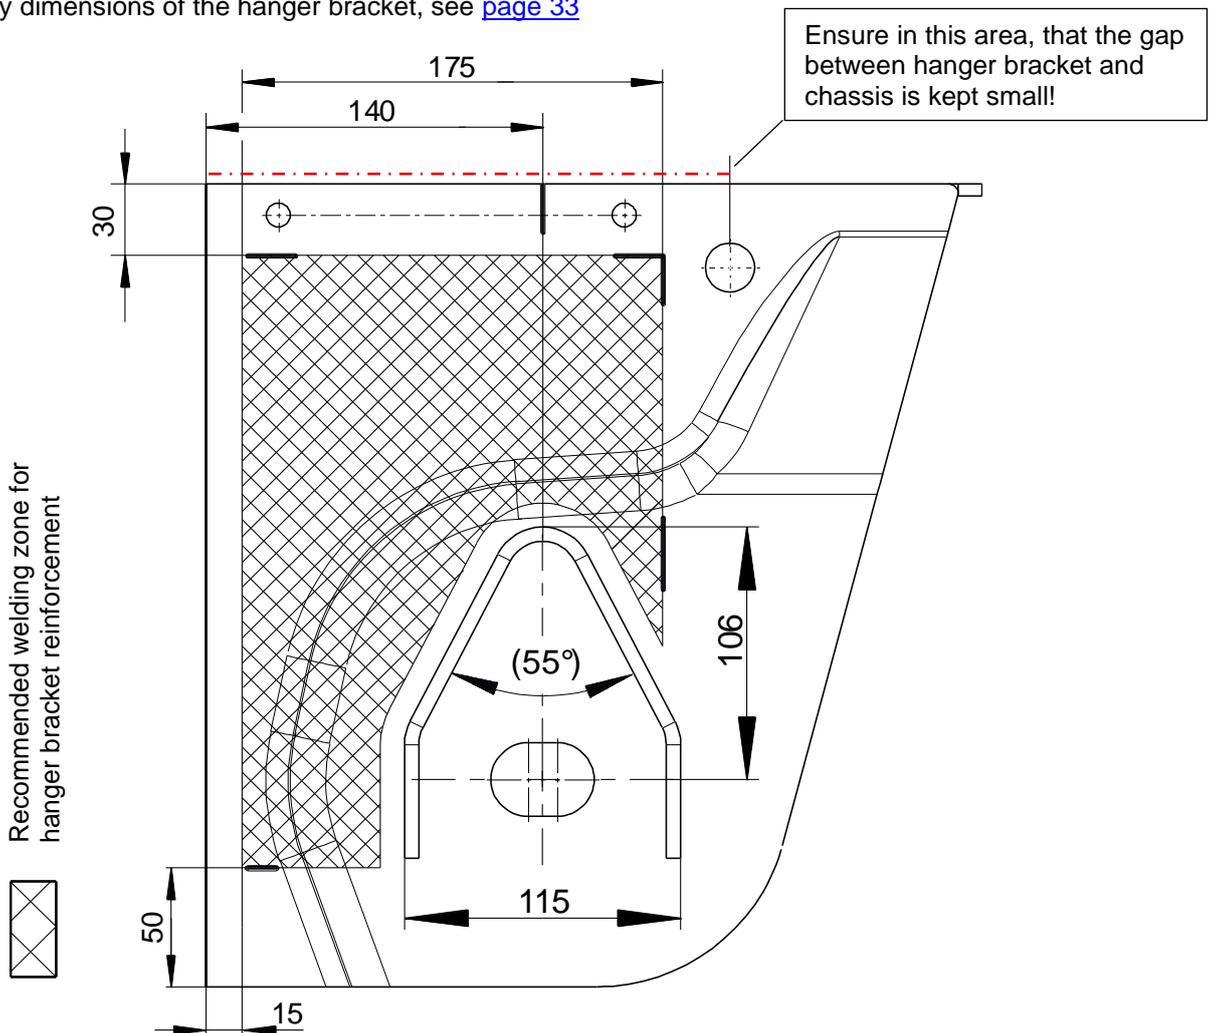

### Design information

The chassis must be reinforced so that it can absorb the forces to which it is exposed. The hanger brackets need an additional reinforcement.

### Recommendation for lateral reinforcement of the hanger brackets

Overlapping of the lateral brace (gusset plate) and inner brace plate of the hanger bracket is necessary to avoid any diaphragm effect. The use of a cross member can replace the lateral brace, but this doesn't replace a crossmember in the chassis.

Geometry dimensions of the hanger bracket, see [page 33](#)

## Welding instruction for hanger bracket „aluminium“

### Note

Cover the trailing arm to protect it from flying sparks. Welding and connecting the welding equipment ground cable to the trailing arm is not permissible. In order to avoid bearing damage, the welding equipment ground cable must also not be connected either to the wheel, wheelhub or wheelflange.

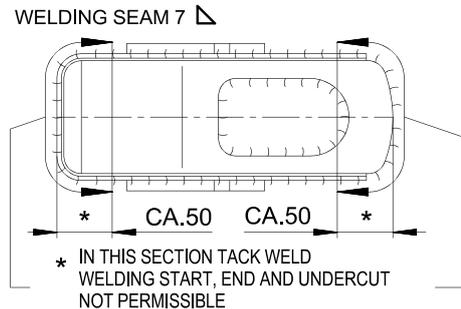

### Material

Al Mg 4,5 Mn W 28 (W=soft; 28=tensile strength Rm min. 275 N/mm max. 350 N/mm)

### Welding recommendation

Pre-treat welding edges with steel brush (brushes with CrNi-steel). They should not be polished (misguides the arc). The welding seam should be kept as narrow as possible (SAF-HOLLAND recommends a = 7 mm, chamfer 5 x 30°), to minimise the heat-induced distortion and tension. SAF-HOLLAND is using the gas metal arc welding procedure with the additional material SG – Al Mg 4,5 in accordance with DIN EN ISO 18273.

Shielding gas “Argon” in accordance with DIN EN ISO 14175, welding seams to DIN EN ISO 5817 “quality levels for imperfections” to “group C”.

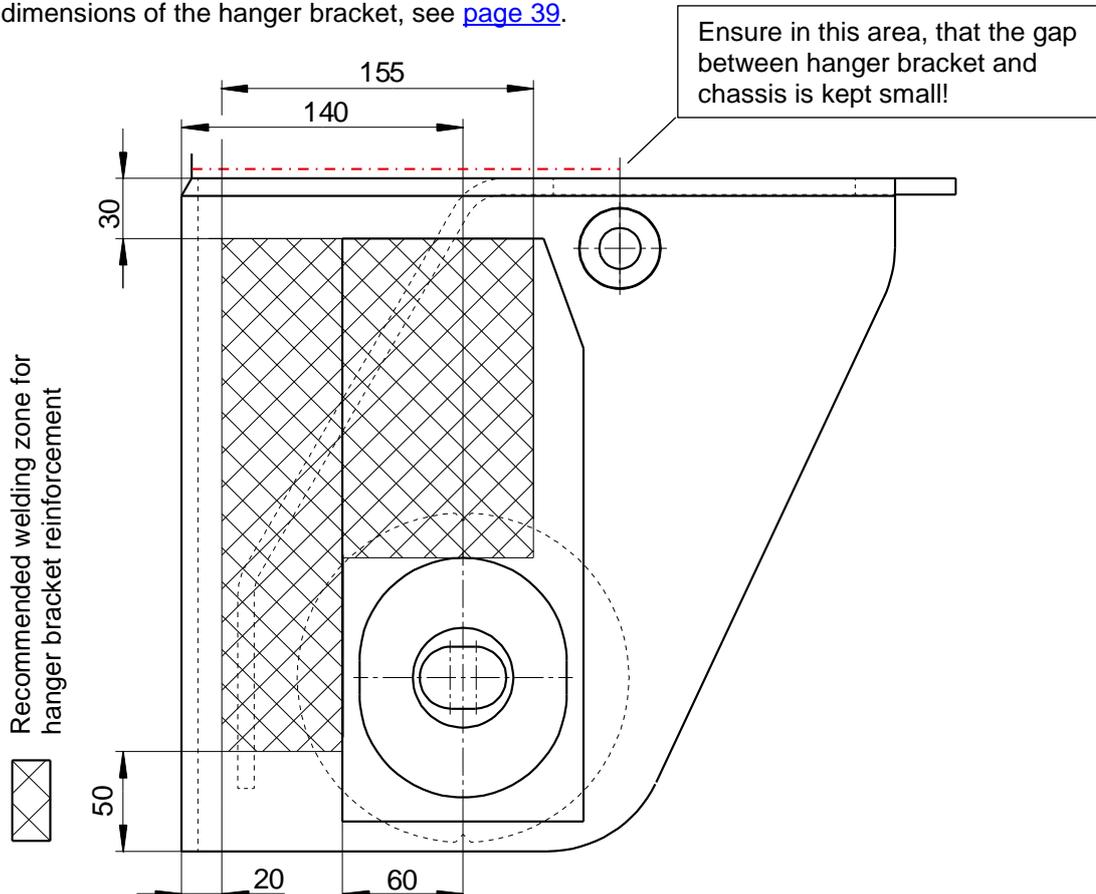

### Design information

The chassis must be reinforced so that it can absorb the forces to which it is exposed. The hanger brackets need an additional reinforcement.

### Recommendation for lateral reinforcement of the hanger brackets

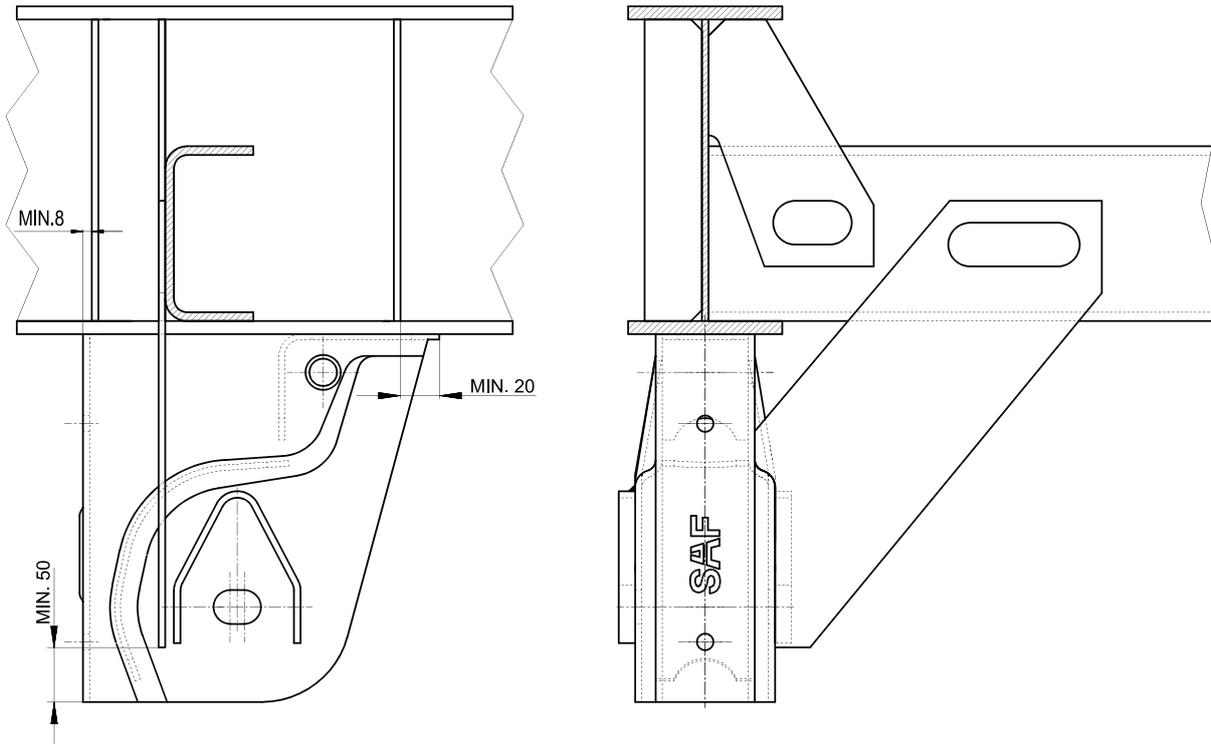

Overlapping of the lateral brace (gusset plate) and inner brace plate of the hanger bracket is necessary to avoid any diaphragm effect.

Geometry dimensions of the hanger bracket, see [page 39](#).

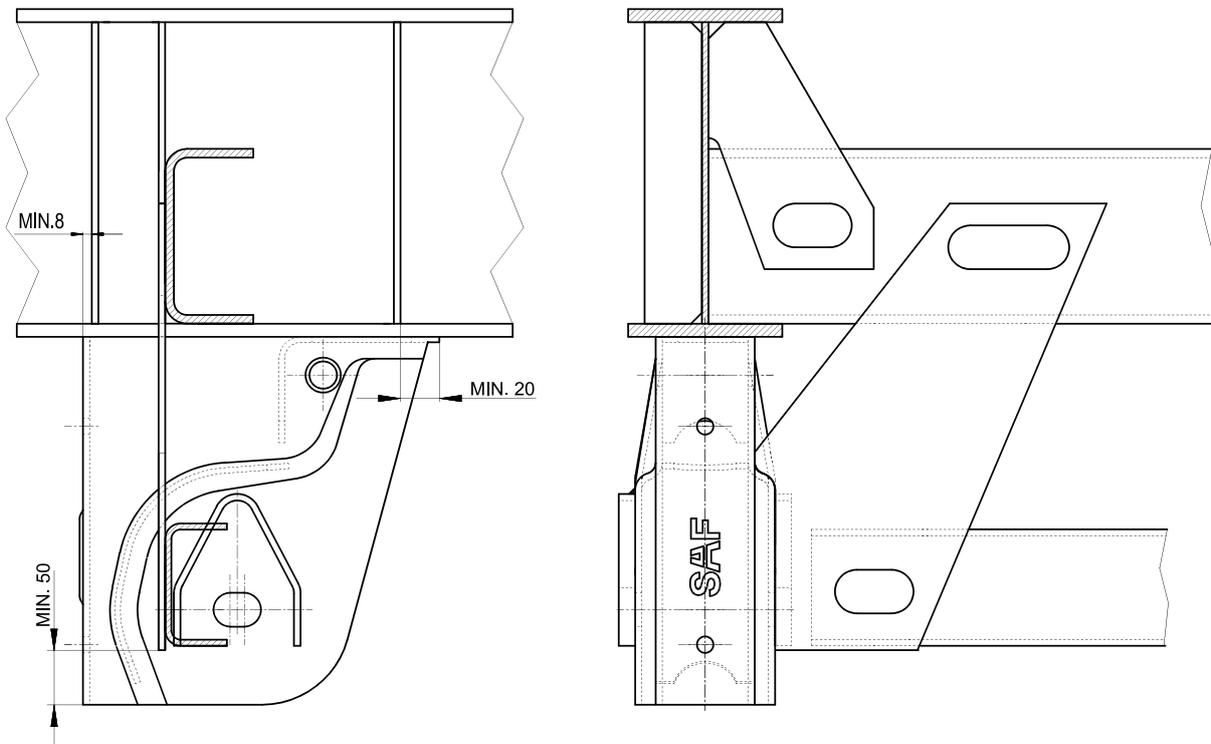

**Recommendation for lateral reinforcement of hanger bracket „steel“**

**for torsionally flexibel chassis**

**for torsionally stiff chassis**

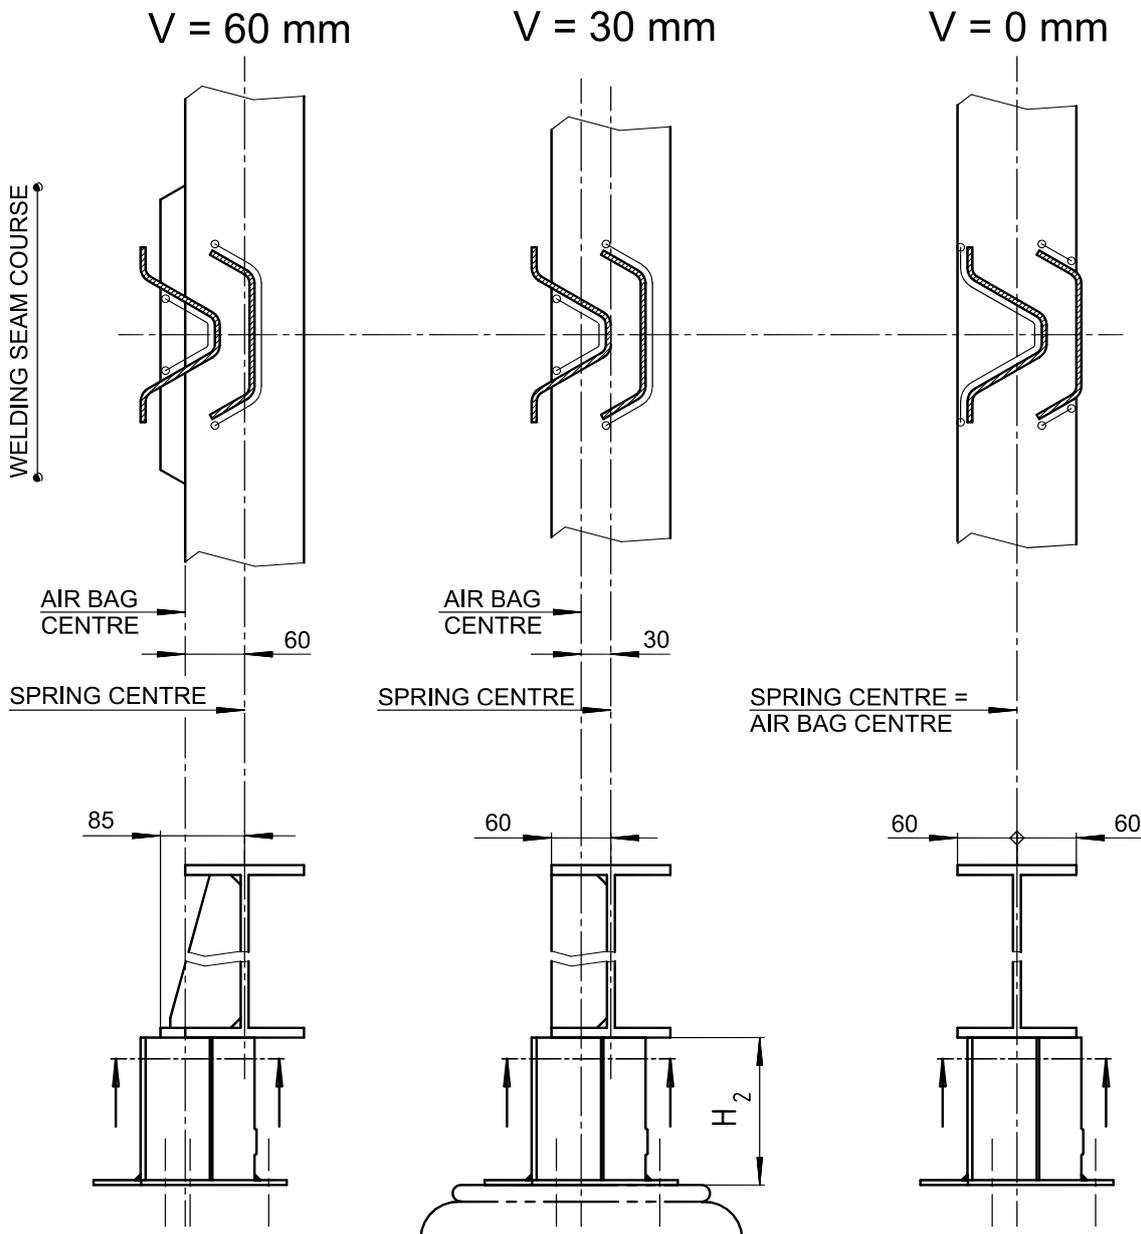

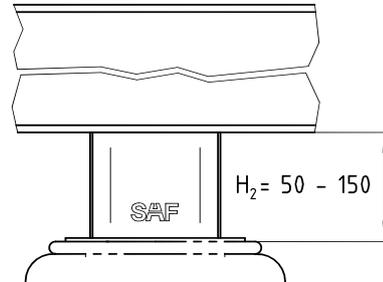

[Hanger bracket welding instruction see page 64.](#)

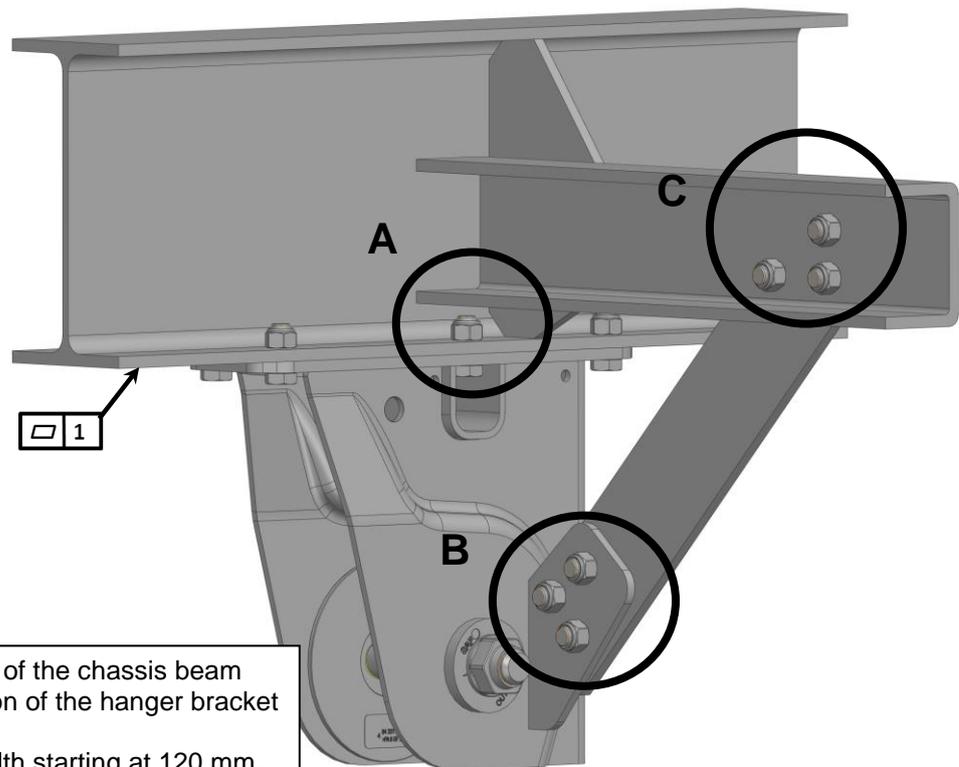

The design and dimensioning of the hanger bracket reinforcement is the responsibility of the trailer manufacturer, this depends on the type and operating conditions of the trailer.

**Welding recommendation for air spring bracket**

Welding seam course and bracing are SAF-recommendations. Dimensions, design and implementation are under responsibility of the trailer manufacturer.

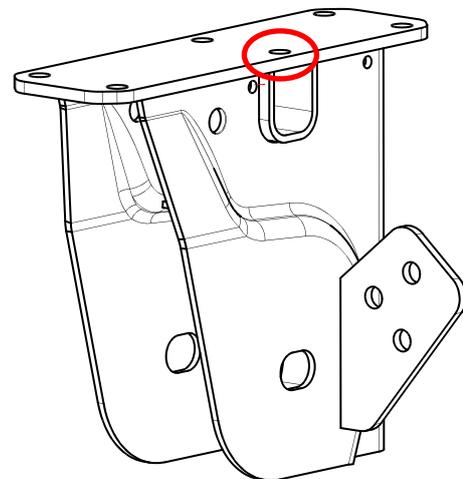

## Installation of hanger brackets „screw-on“

Max. unevenness of the chassis beam  
1 mm in the section of the hanger bracket  
mounting plate.  
Chassis beam width starting at 120 mm.

### Installation:

- 1) Install the hanger bracket with at least 5 screws M16, 10.9, **230 – 250 Nm** on the chassis. Only the middle screw towards axle centre can fail (Pos. A).
- 2) Pre-assemble the lateral brace as appropriate with 3 screws M16, 10.9 on the hanger bracket (Pos. B) and chassis (Pos. C) – do not tight these yet.  
hole in cross member  $\varnothing$  16mm  
hole in brace  $\varnothing$  18mm
- 3) Adjustment of track and mounting the pivot bolt according to SAF-HOLLAND installation recommendation, see [page 70](#).
- 4) Tighten the lateral brace connections (Pos. B und C ) on the hanger bracket and chassis with maximum allowed torque.

Lateral brace and bolted connections are not SAF-HOLLAND delivery volume.

Attachment faces for bolting connection parts:

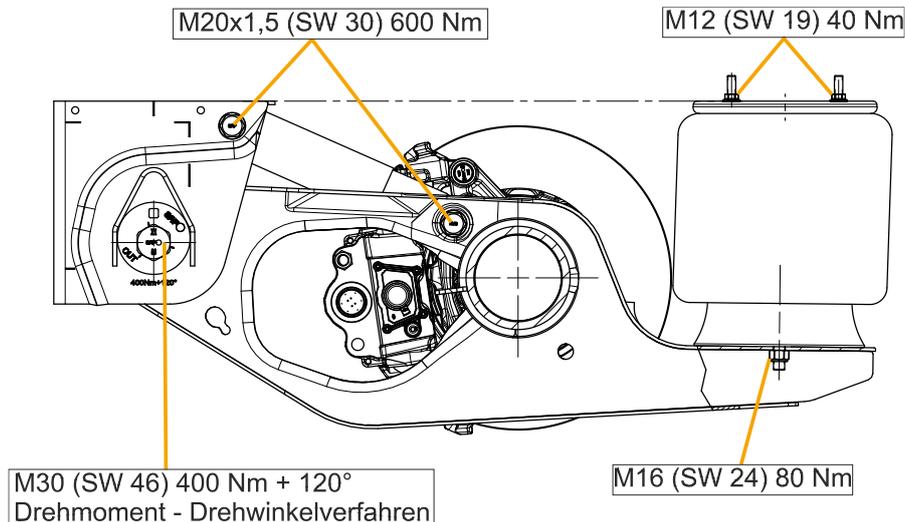

- coat thickness when painting max. **30  $\mu$ m**
- coat thickness when galvanizing max. **100  $\mu$ m**

The top plate with the verified hole pattern as the lateral position and hole pattern of the lateral brace are the same for all [mentioned hanger brackets](#).

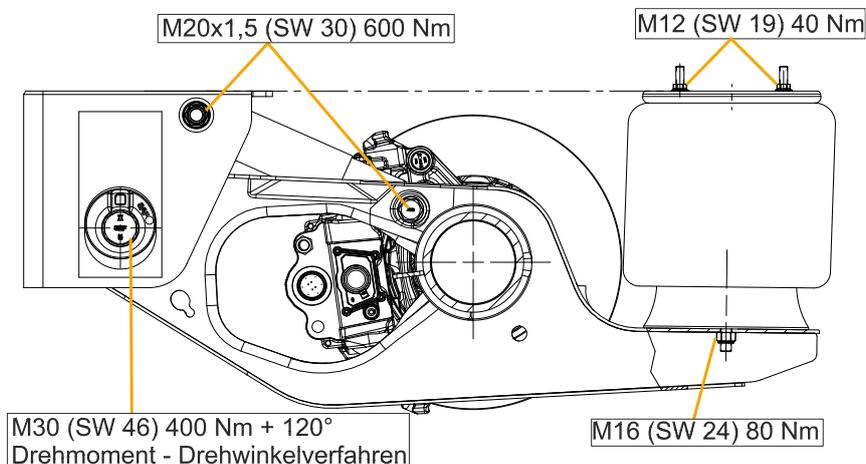

## Tightening torques

The max. coating thickness on the contact surfaces (interfaces) of the trailing arm and shock absorber bolts must not surpass **45 µm**!

### Hanger bracket „steel/ stainless steel“ – trailing arm – shock absorber – air spring

### Hanger bracket „aluminium“ – trailing arm – shock absorber – air spring

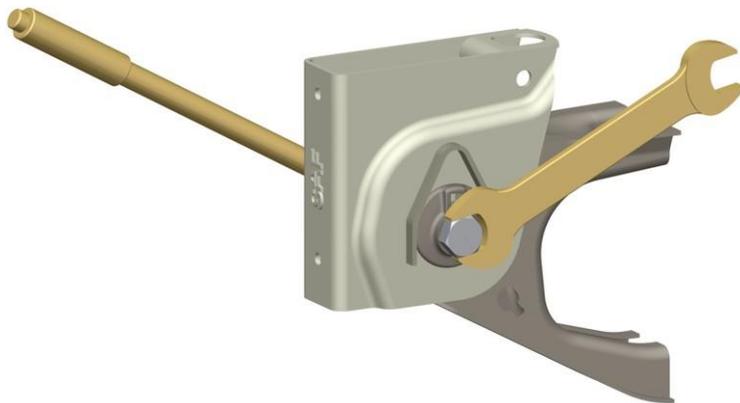

#### Attention:

- Threads are not to be oiled or greased!
- Pivot bolt mounting for hanger bracket „steel“ maintenance free.
- Connections on hanger bracket „aluminium“ or stainless steel are not maintenance free!  
This needs to be checked after first 5 weeks or 10.000 km, further checks every 12 months or 100.000 km. Inspection torque:
  - of 1200 Nm for the pivot bolt connection
  - of 400 Nm for the shock absorber connection.
- Pivot bolt mounting on galvanized hanger brackets are up to a coating thickness of **120 µm** maintenance free.
- After taking the trailer into service and re-alignment of the axles / opening the pivot bolt connection, the pivot bolt connection needs to be exchanged.

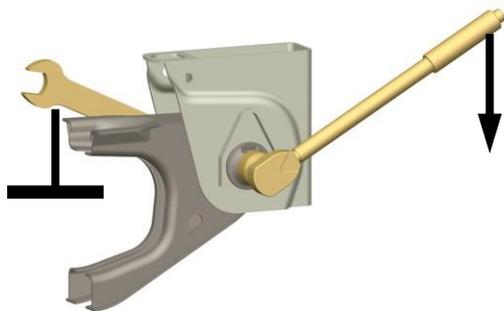

## Tightening instructions for adjustable pivot bolt

Attention always within the specified ride height range!  
No paint residues between eccentric washer and hanger bracket!

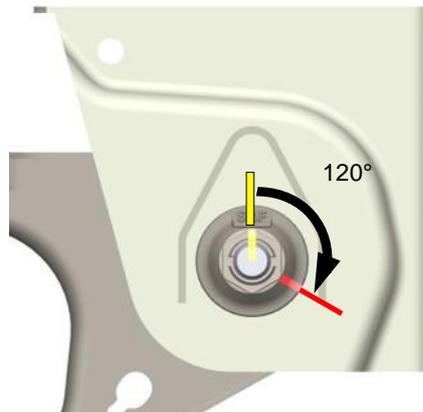

Bolt head always on the eccentric washer side

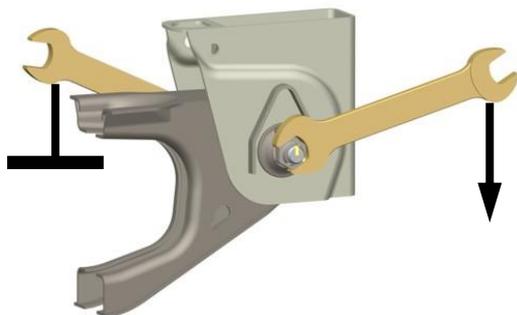

Pre tightening **400 Nm**  
Use torque wrench

Marking for angle tightening

Angle tightening **120°**  
Use impact wrench or extend lever to 2,5 Meter

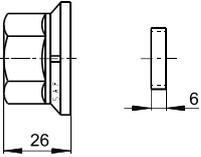

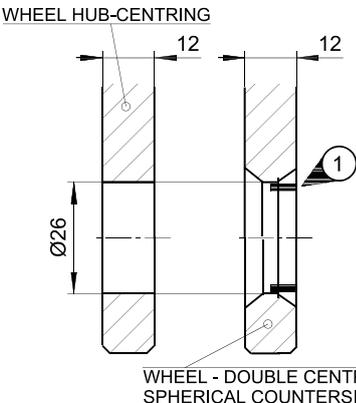

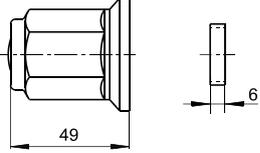

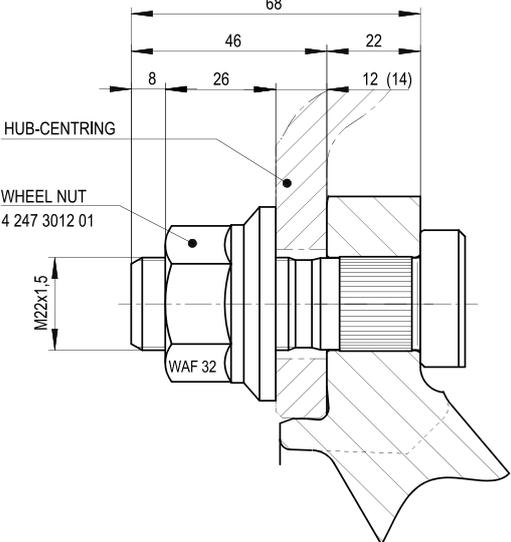

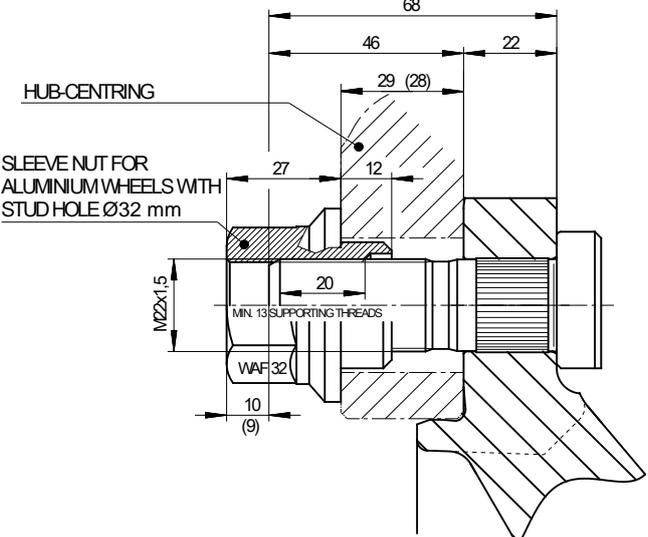

Visual inspection

### Wheel fixing – standard, wheel size 19,5”/22,5“, disc brake (code 48)

### Brake chamber bracket

Observe the installation instructions of the brake chamber manufactures! A major factor for the functionality is the compliance with the specified tightening torque and its regular checking.

#### Design with SNK 420, INTRADRUM – rigid axles

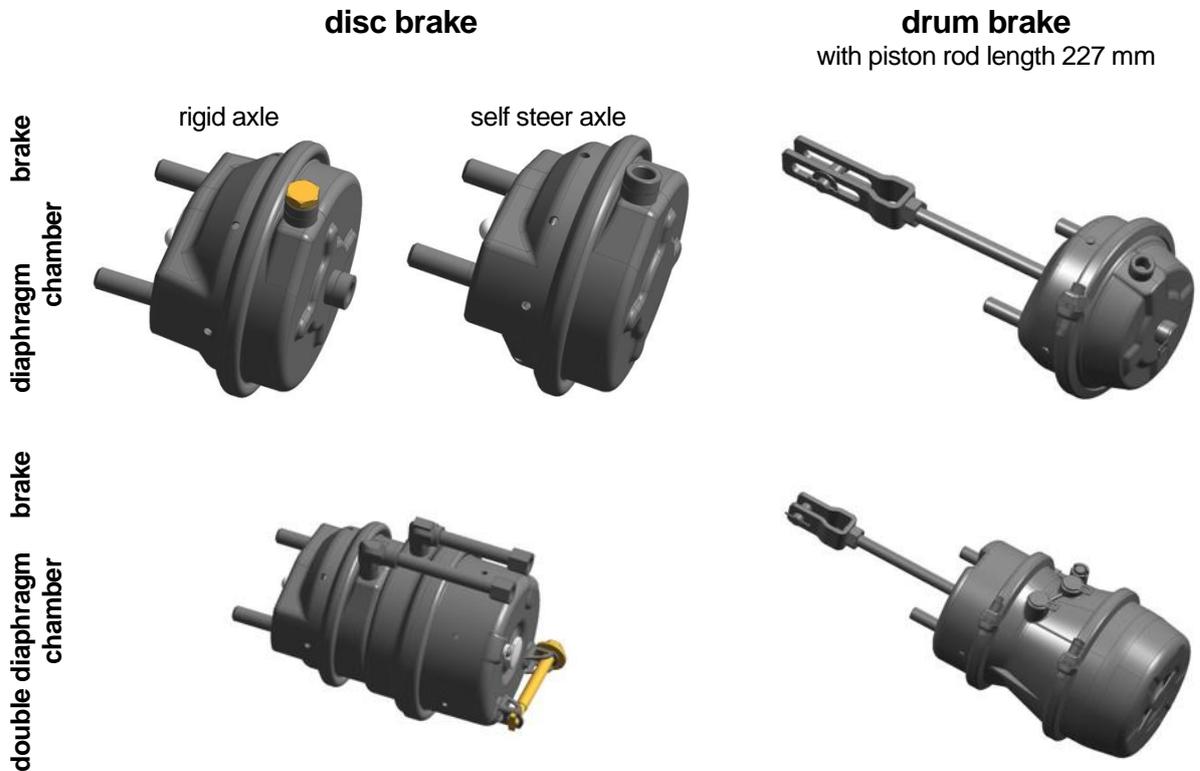

lever length of slack adjuster	Kennung	Brake chamber mounting position on the bracket
178 mm	E	5 – 6
152 mm	D	3 – 4
140 mm	C	2 – 3
127 mm	B	1 – 2
105 mm	A	

Brake chamber position on the bracket are valid for manual and automatic slack adjusters!

## Overview SAF-HOLLAND brake chambers

The brake chambers can be combined with all axle versions produced by SAF-HOLLAND.

The brake chambers in overview:

For axles with disc brake 22,5" and 19,5"

The versions in the table are available in both OEM and spare parts:

model	size	partnumber <sup>1)</sup> brake chamber INTRADISC plus INTEGRAL	
		rigid axle	self steer axle
Diaphragm brake chamber	16"	3 454 1065 60	3 454 1081 60
	18"	3 454 1066 60	-
	20"	3 454 1067 60	3 454 1082 60
	22"	3 454 1068 60	-
	24"	3 454 1069 60	-
Double diaphragm brake chamber	16"/24"	3 454 1077 64	-
	16"/30"	3 454 1096 64	-
	18"/24"	3 454 1074 64	-
	20"/24"	3 454 1079 64	-

<sup>1)</sup> partnumbers include the 2 fixing nuts

For axles with drum brake and piston rod length 227 mm

The versions in the table are available in both OEM and spare parts:

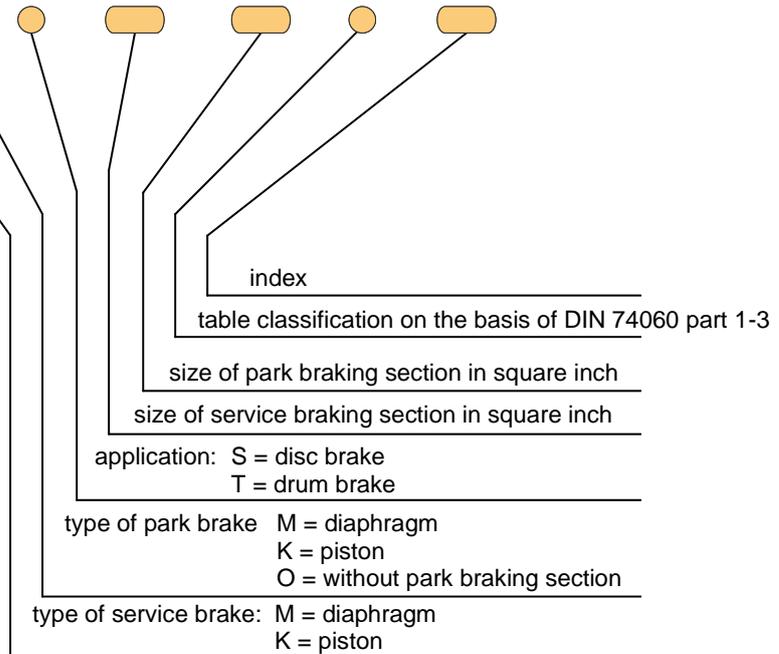

model	size	partnumber <sup>1)</sup> brake chamber INTRADRUM	
		rigid axle	self steer axle
Diaphragm brake chamber	20"	3 454 1089 20	-
	24"	3 454 1090 20	-
Double diaphragm brake chamber	24"/30"	3 454 1092 20	-

<sup>1)</sup> partnumbers include the 2 fixing nuts

### Typ identification for SAF-HOLLAND brake chambers

Letters are marked with "X", numbers with "0"  
example:

M O S 16 00 A 60  
M M T 24 30 B 20  
X X X 00 00 X 00

### Technical data

For axles with disc brake 22,5" and 19,5"

model	size	type	test report	max. stroke s <sub>max</sub> [mm]	service brake: force [N] at 6,5 bar	parking brake: force [N] at 30 mm stroke

double diaphragm brake chamber	24"/30"	MMT2430B20	BC 0172	74	227	9175	6440

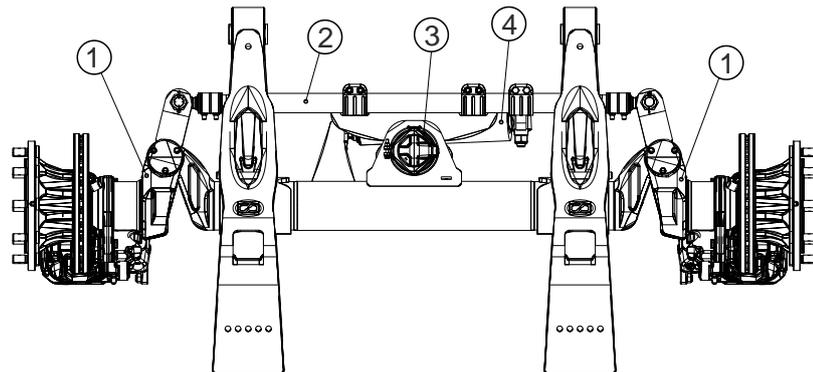

Further technical data can be found on the referenced test reports or can be provided by SAF-HOLLAND ([Download-Center: SAF-HOLLAND Deutschland \(safholland.com\)](http://safholland.com)) Brake calculations with these brake chambers can be provided by the brake system manufactures HALDEX, WABCO or KNORR.

## Self-steering axle with stabilising damper

### Steering mechanism

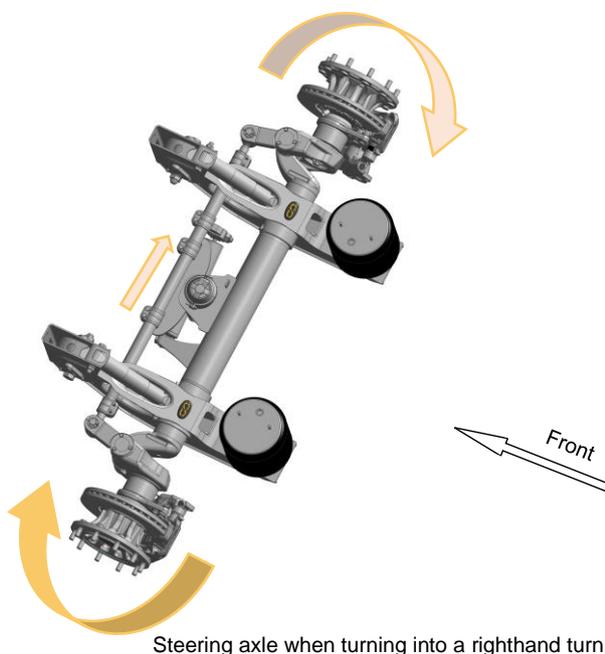

In the case of self-steering axle with stabilising damper, the steering mechanism comprises:

- two pivot-mounted steering knuckles (1)
- a steering tie rod (2)
- a reversing lock (3)
- a stabilising damper (4)

### Functional description

Side forces occur in the tyre contact areas when vehicles drive round bends or overtake other vehicles. On account of the offset between the steering knuckle bearings to the axle center of 140mm, these side forces (left and right) produce a steering torque that acts on the steering knuckles and forces them into an angled position. This angled position is the so-called axle steering angle. The steering tie rod is responsible for the synchronous turning movement between the left and right steering knuckles.

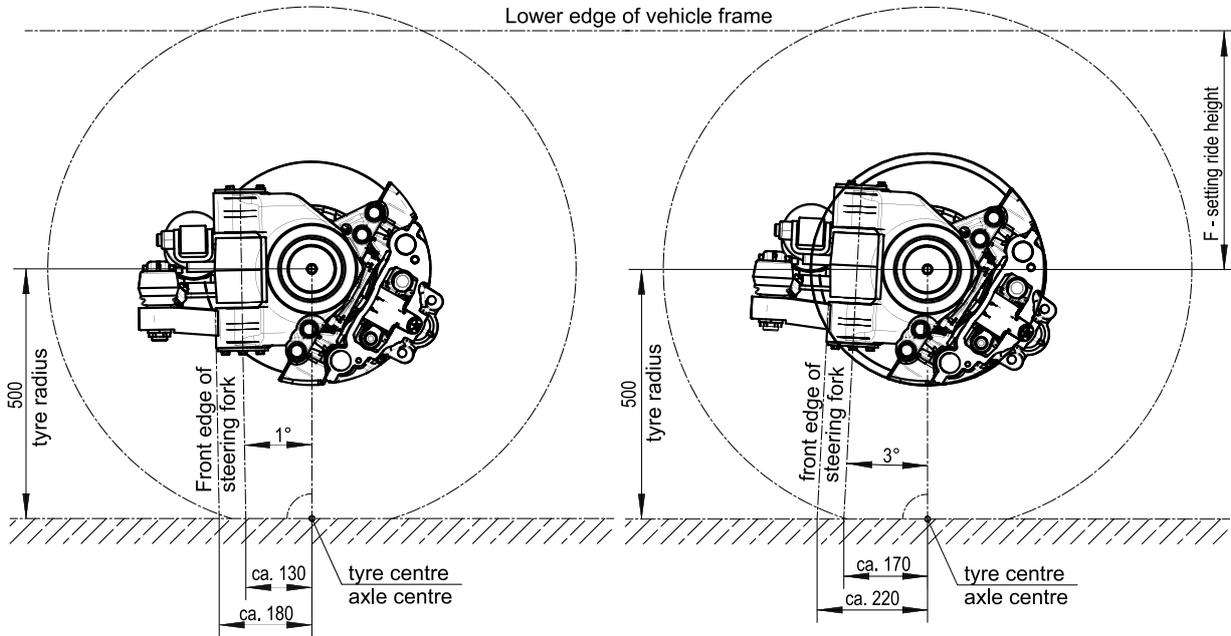

The stabilisation damper is suspended on the axle body on one side and on the steering tie rod on the other. This is either pressed (shortened) or pulled (lengthened) depending on the angle of rotation of the steering knuckles. The special design of this SAF stabilisation dampers means that its internal spiral spring is always compressed during both movements.

As the side forces decrease, the spring force dominates the side forces, and forces the tyres and also steering knuckles back into the straight position. The spiral spring, supported by the damper properties, is also the reason for a sturdy and flutter-free straight drive.

To make reversing possible with a self-steering axle, it has to be set rigid. This is done electro-pneumatically through the reversing lock, the task of which is to prevent the steering tie rod moving and to block it in the central position (driving straight on) by the spring-type cylinder.

### Caster

Installed in a suspension system, the caster (distance steering bolt centre lengthened to the ground to the centre of the tire contact area) may vary in vehicle setting between 130 mm (steering pin tilted forwards) and 170 mm (steering pin tilted backwards). In contrast to leaf spring suspension, the caster can be influenced in the case of air suspension by the ride height setting.

### Steering angle

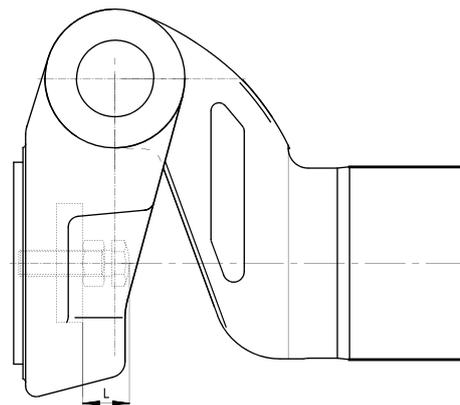

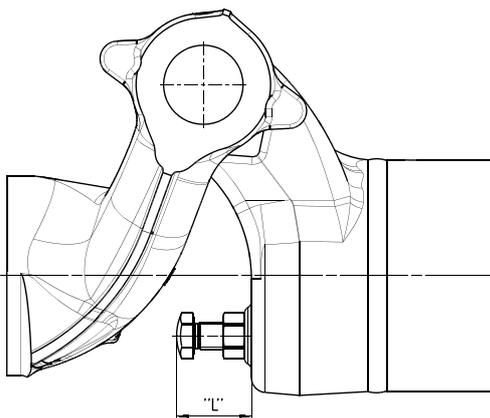

With SAF-HOLLAND self-steering axles, the steering angle is limited to 20° on account of the design. This can be reduced if required, depending on the track width and spring centre ratio. For this purpose, the adjusting screw on the steering knuckle should be screwed out according to the values in the following table (self-steering axle =  $\alpha$ , screw extension = L) and then countered by a locknut.

For self-steering axle version(s):  
B(l)LL9...

$\alpha$ [°]	L [mm]	$\alpha$ [°]	L [mm]
20	31	12	56
18	37	10	63
16	43	8	69
14	50		

B(l)L9... und SL9...

$\alpha$ [°]	L [mm]	$\alpha$ [°]	L [mm]
20	35	12	54
18	40	10	59
16	45	8	64
14	49		

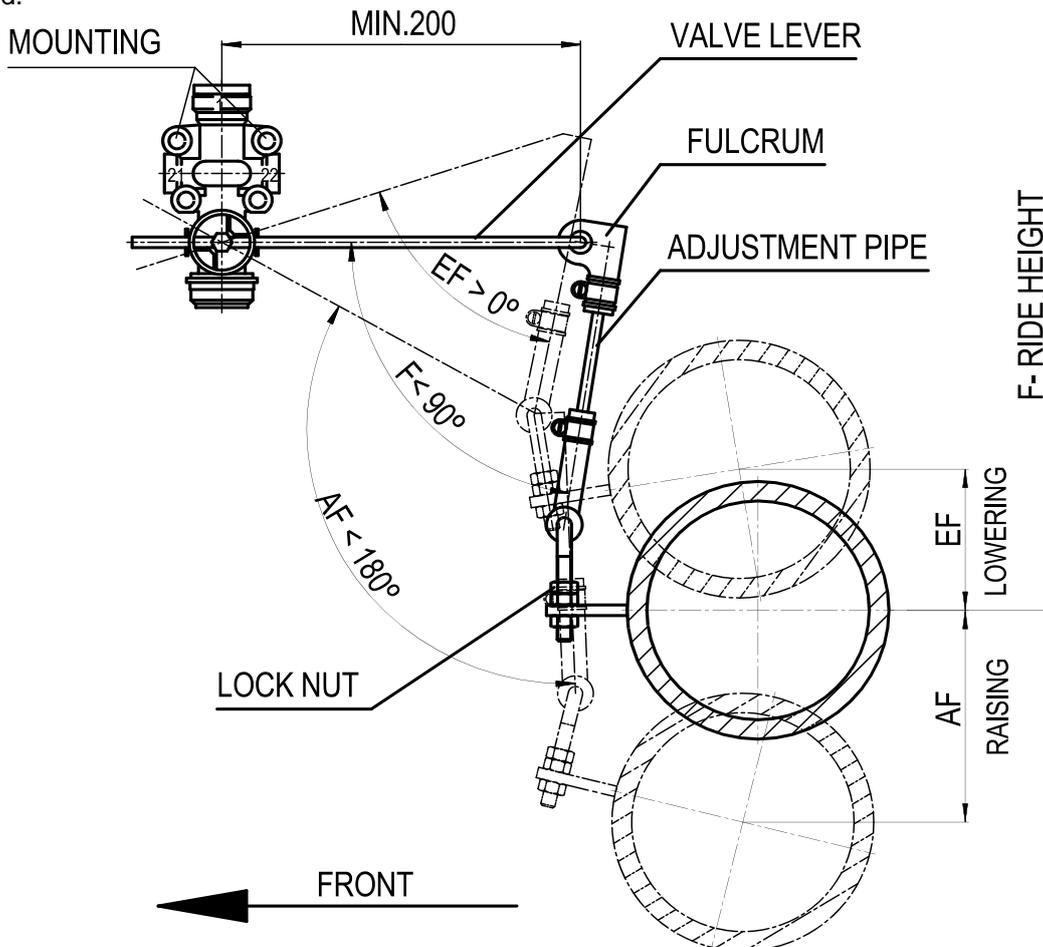

## Adjustment of the air suspension ride height

### Air suspension valve

As standard, SAF-HOLLAND air suspension system require only one air suspension valve. The air suspension valve controls the air spring pressure in relation to the trailer load in order to maintain a constant ride height (F) in every load condition.

The air suspension valve is fastened to the trailer frame with screws and connected to the axle via the pivot joint (valve lever and adjustment pipe). On tri-axle trailers, the system is generally connected to the middle axle (normally in the middle of the axle), and on twin-axle trailers to the rear axle. In special cases (e.g. large trailer tilt angle), the air suspension valve can be installed on the rear axle.

For trailers with axle lifting system, the axle to which the system is connected depends on the axle to be lifted.

### Installation

The valve lever should be at least 200 mm long and is horizontal when the trailer is in the driving position. As a function check, move the lever down slightly. Air must now escape via the venting cap into the atmosphere. If air flows into the air springs when the lever is pushed down, the valve lever has to be turned through 180°. For this the valve lever has to be disconnected. The ride height is set by adjusting the adjustment pipe in the fulcrums and by turning the lock nuts. The adjustment must be carried out with the trailer standing on level ground. It can be carried out with the trailer either empty or loaded.

### Note

For a final check, the air suspension system should be lowered to the suspension stop or raised to the limit (shock absorbers, stop ropes, air spring length). During this process, the specified angle between valve lever and adjustment pipe must not be exceeded in order that the valve lever does not move in the wrong direction.

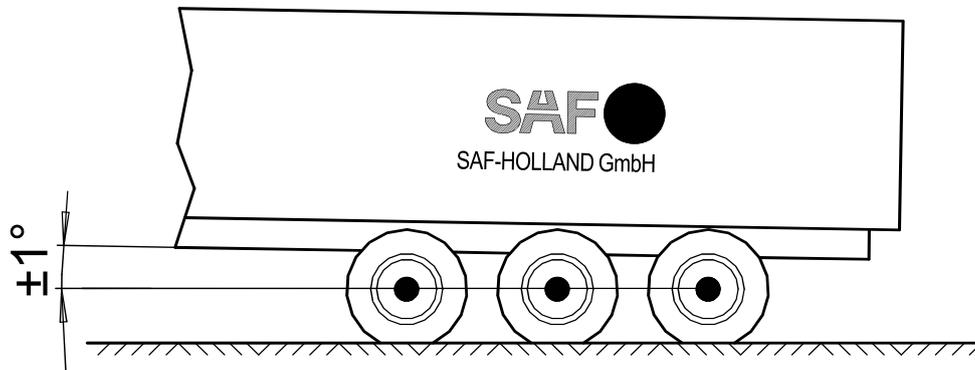

## Ride heights

Adjust the ride height of the air suspension to the permissible range indicated in the corresponding SAF-HOLLAND documents

With single axles, a minimum lowering of **60** mm is allowed.  
With multiple axles, a minimum lowering of **70** mm is allowed.

Exception:  
For multi-axle trailers with lift axles, the minimum lowering at the lift axle should not be less than **100** mm in order to ensure an adequate ground clearance

## Semi-trailer tilt angle

The maximum tilt angle of the semi-trailer can not be more than  $\pm 1^\circ$  or 20 mm/m.

## Axle alignment

### General

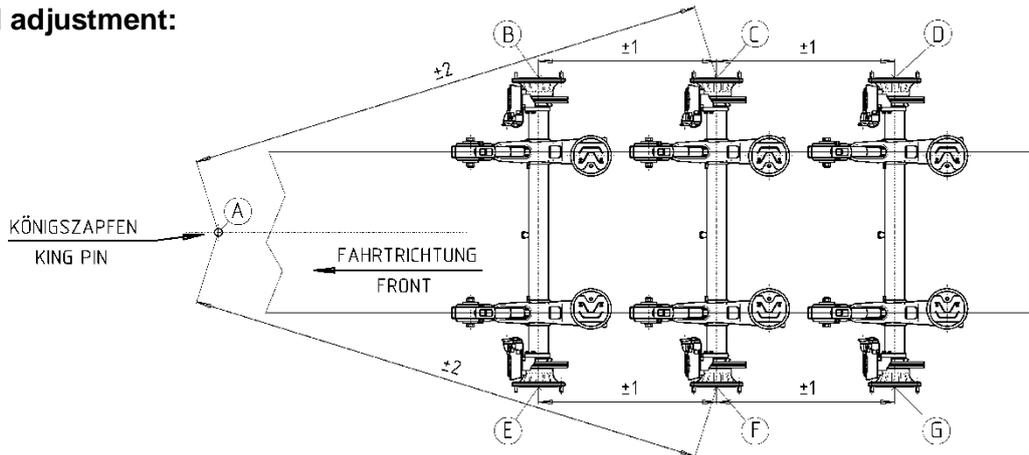

In order to compensate the production tolerances, an axle alignment and, if necessary, an adjustment should be carried out.

The maximum possible wheelbase correction per axle is  $\pm 6$  mm, [see page 37](#)

### Basic condition

The axle alignment must be done in unladen situation. With air suspension the trailer has to be adjusted in the right ride height.

### Conventional adjustment:

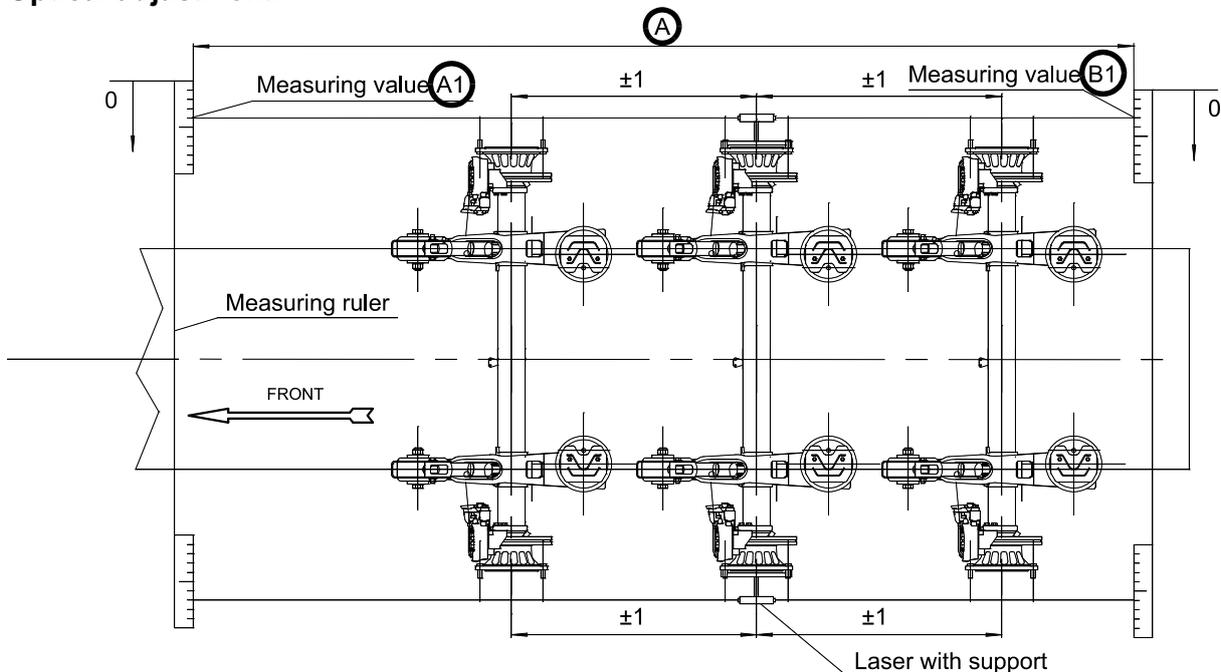

### Procedure:

Determine the lengths of the diagonals **A - C** and **A - F** for the middle axle (reference axle) by comparison measurements, permitted deviation maximum 4 mm.

Check the wheelbases **B - C** and **E - F** for the front axle and **C - D** and **F - G** for the rear axle and correct, if necessary, permitted deviation maximum 2 mm.

### Optical adjustment:

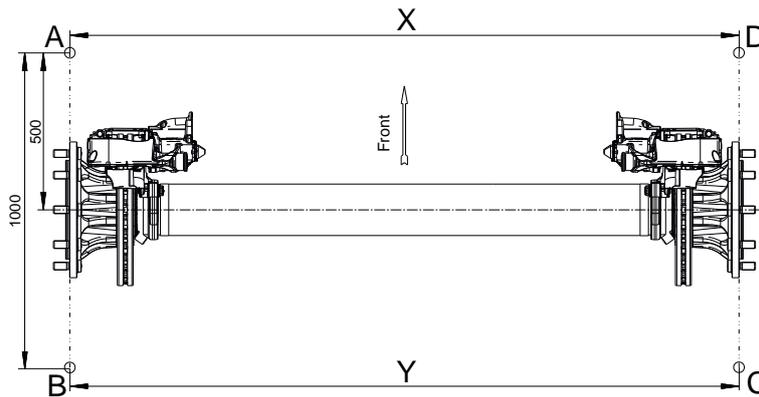

Calculation of the toe-in and toe-out values:

$$\frac{A1(\text{mm}) - B1(\text{mm})}{A(\text{m})} = C$$

C (positive value) = toe-in  
C (negative value) = toe-out

Observe the operating and setting instructions of the measuring system manufacturer.

**Positive toe-in/ toe-out:**

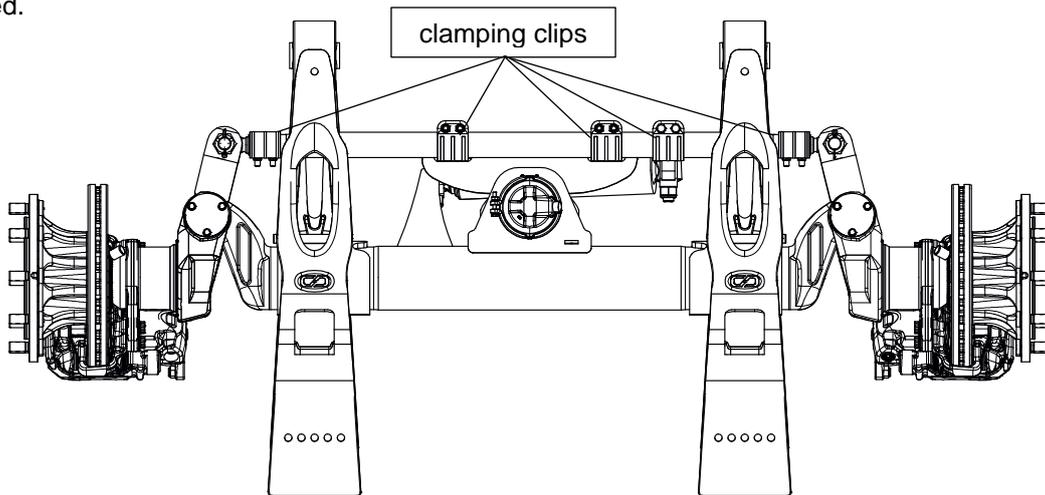

**Rigid axle:**

Toe-in: -2 mm/m (-6,75') to +3,5 mm/m (12'), or  $(-2 < (Y - X) < 3,5 \text{ [mm/m]})$

**Self-steering axle:**

Toe-in: +4 mm/m (14') to +7 mm/m (24'), or  $(4 < (Y - X) < 7 \text{ [mm/m]})$

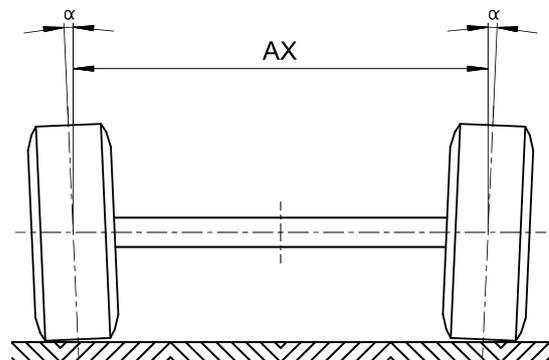

The setting is carried out by lengthening or shortening the steering tie rod. After all the clamping clips have been loosened, the required dimension is set by turning steering tie rod. The tie-rod ends are not affected.

Measuring the "straight ahead" position of the axle and if needed re-adjusting AC – BD, deviation max. 3 mm

**Camber:**

The wheel camber ( $\alpha$ ) is determined by design and cannot be adjusted. For the unloaded axle, the value is between 3,5 mm/m (12') and 0 mm/m (0').

In order to avoid tire wear, we recommend that an axle alignment is performed at regular intervals. We recommend the use of an optical measuring system for carrying out the axle alignment. For alignment, only the centres of the middle of the wheel cap or the middle of the axle stub end are of interest as reference points. Possible causes of deviations in the axle alignment are:

- ✓ Wear of the pivot bush
- ✓ Deformation of the axle assembly components due to improper use.

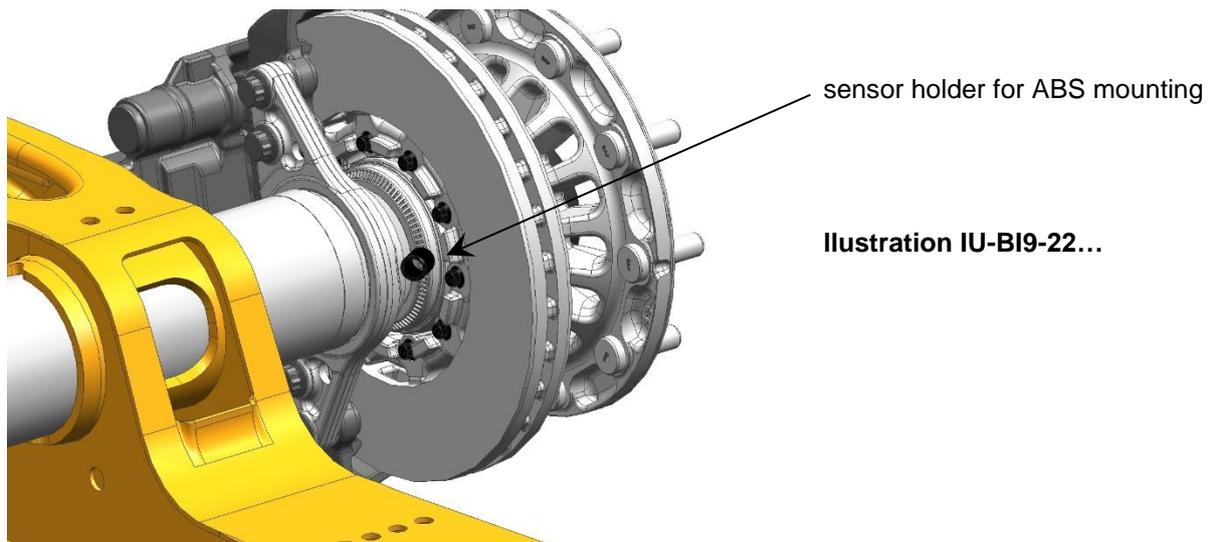

## Overview of exciter ring to the different axle versions

SAF-HOLLAND standard supplies the exciter ring and sensor bracket preinstalled. The number of teeth is now dependent on the wheel mounting; tire size installed and their dynamic rolling circumference have been taken into consideration.

Wheel fixing			Tire size	Axle version	No. of teeth
bolt pitch circle	centre bore	no. of bolts			
275	220	8	19,5"/ 22,5"	S9-3718	90
335	280	10		BI(L)9-19	
			BI(L)9-22		
			S(L)9-4218		

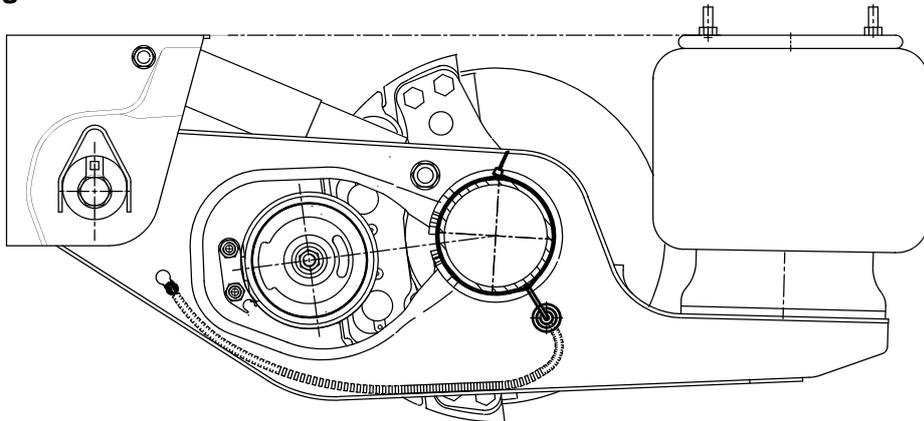

### Note:

The position of the exciter ring is on the inside of the wheel hub, irrespective of the type of brake (disc or drum).

## Installation instruction, ABS cable SAF INTRADISC *plus* INTEGRAL

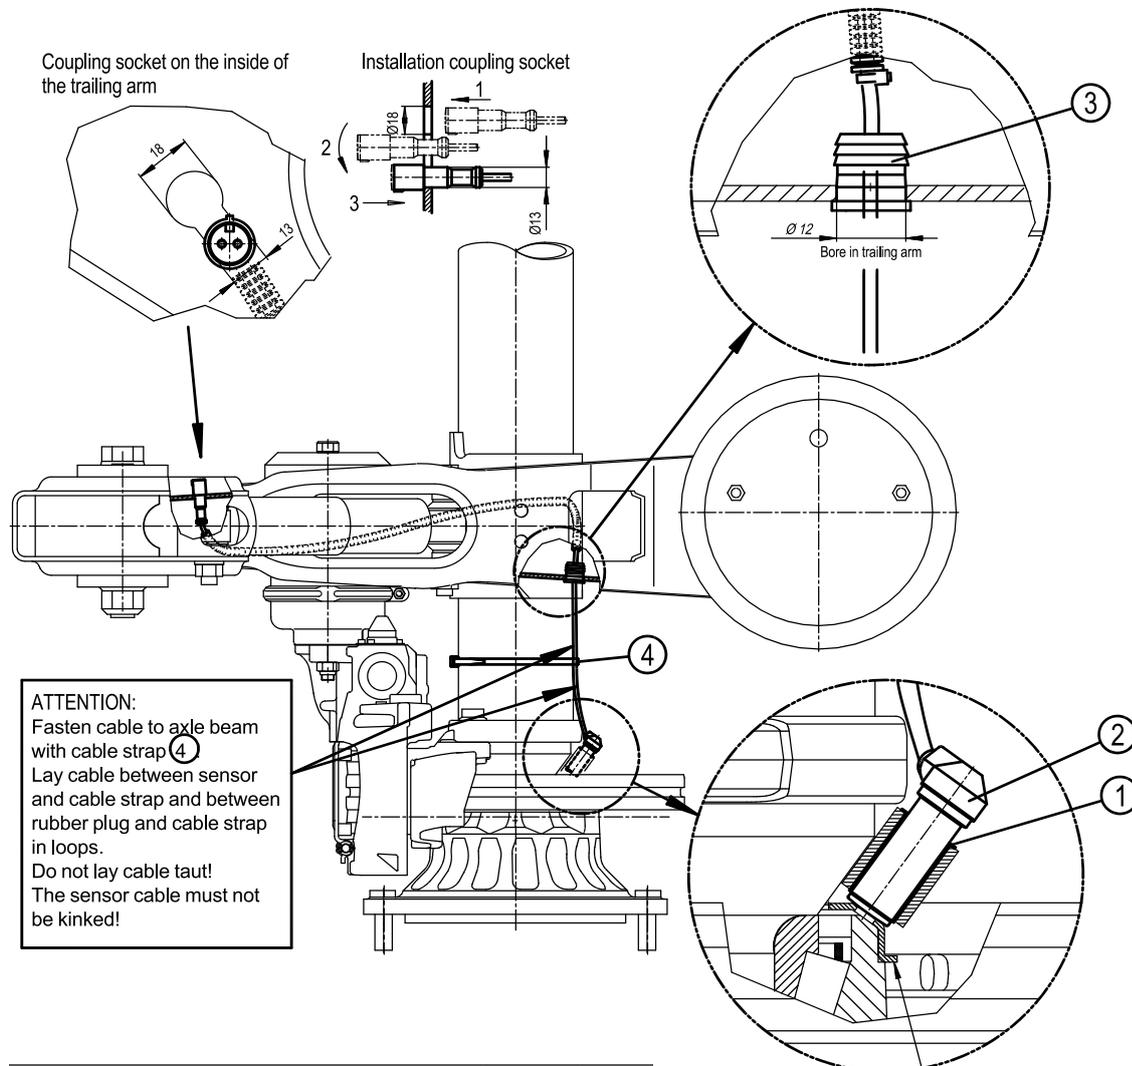

### rigid axle

Plug pressed completely into  $\varnothing 22$  diameter bore in trailing arm

Coupling socket on the inside of the trailing arm

Installation coupling socket

**ATTENTION:**  
Fasten cable to axle beam with cable strap ④  
Lay cable between sensor and cable strap and between rubber plug and cable strap in loops.  
Do not lay cable taut!  
The sensor cable must not be kinked!

EXCITER RING - 90 TEETH

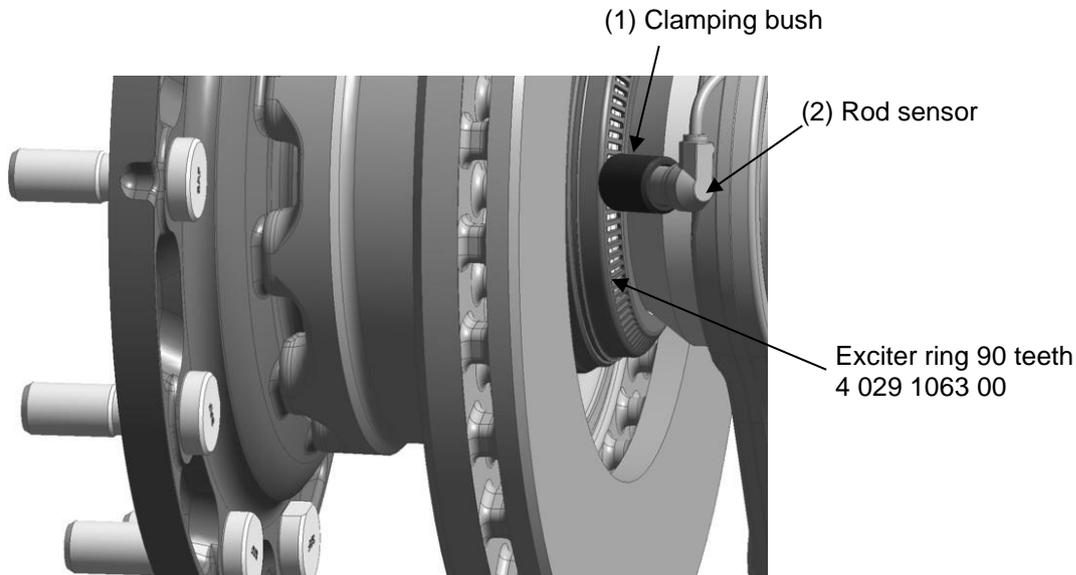

Clamping bush -part ①- pressed in completely  
Rod sensor -part ②- pressed in completely

Ordernr. for ABS-group: 3 029 1064 00 (per axle 2x)		pos.:	per kit
clamping bush	4 029 1013 00	1	1x
rod sensor	4 029 1064 00	2	1x
plug	4 337 2028 00	3	1x
cable strap	4 194 2030 01	4	1x

## SAF-O-Meter

Designation:

Rolling circumference range:	SAF-O-meter orderno.:	Tire example:
2360 – 2455 mm	4 388 0241 01	245/70R17,5" or 235/75R17,5"
2590 – 2690 mm	4 388 0264 01	265/70R19,5"
2655 – 2765 mm	4 388 0271 01	445/45R19,5"
2850 – 2970 mm	4 388 0291 01	425/55R19,5"
2980 – 3100 mm	4 388 0304 01	385/55R22,5"
3125 – 3250 mm	4 388 0319 01	11R22,5" or 295/80R22,5"
3185 – 3315 mm	4 388 0325 01	385/65R22,5"
3420 – 3560 mm	4 388 0349 01	425/65R22,5"

For example:

Tire: 385/65R22,5" with rolling circumference (E.T.R.T.O Norm): 3248 mm

This rolling circumference fits best to the range 3185 - 3315 mm so:

- SAF-O-Meter 4 388 0325 01
- Hub cap 4 304 0103 02.

### Installation

Please check before fitting whether you have received the right SAF-O-meter suitable to your tire size

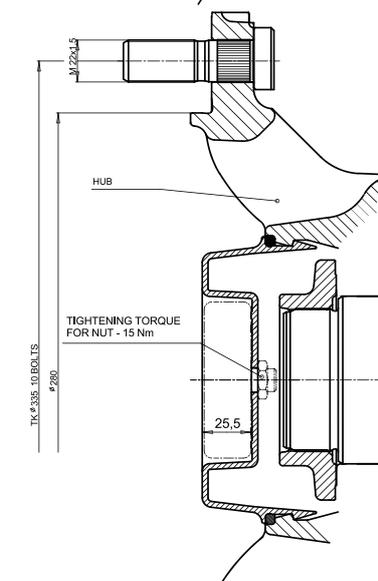

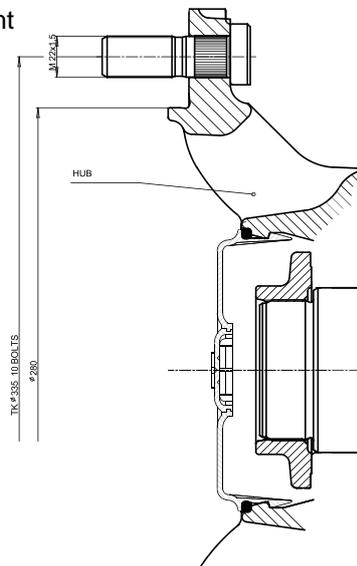

standard hub cap  
4 304 0152 00

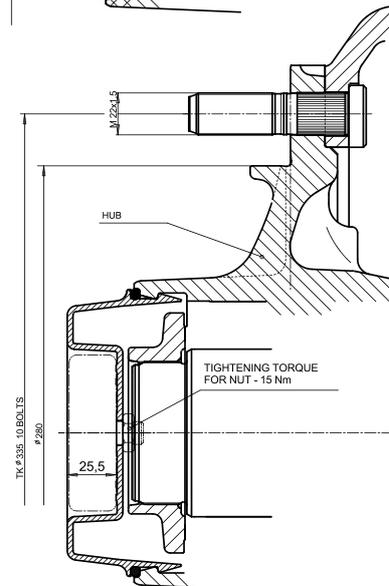

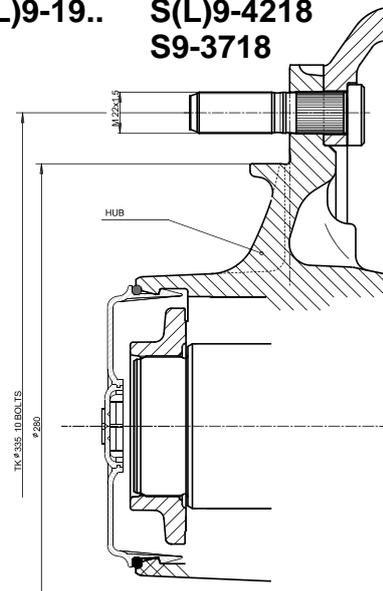

hub cap for SAF-O-meter  
4 304 0103 02

axle versions:  
**B(I)(L/LL)9-22.. and B(I)(L/LL)9-19..**

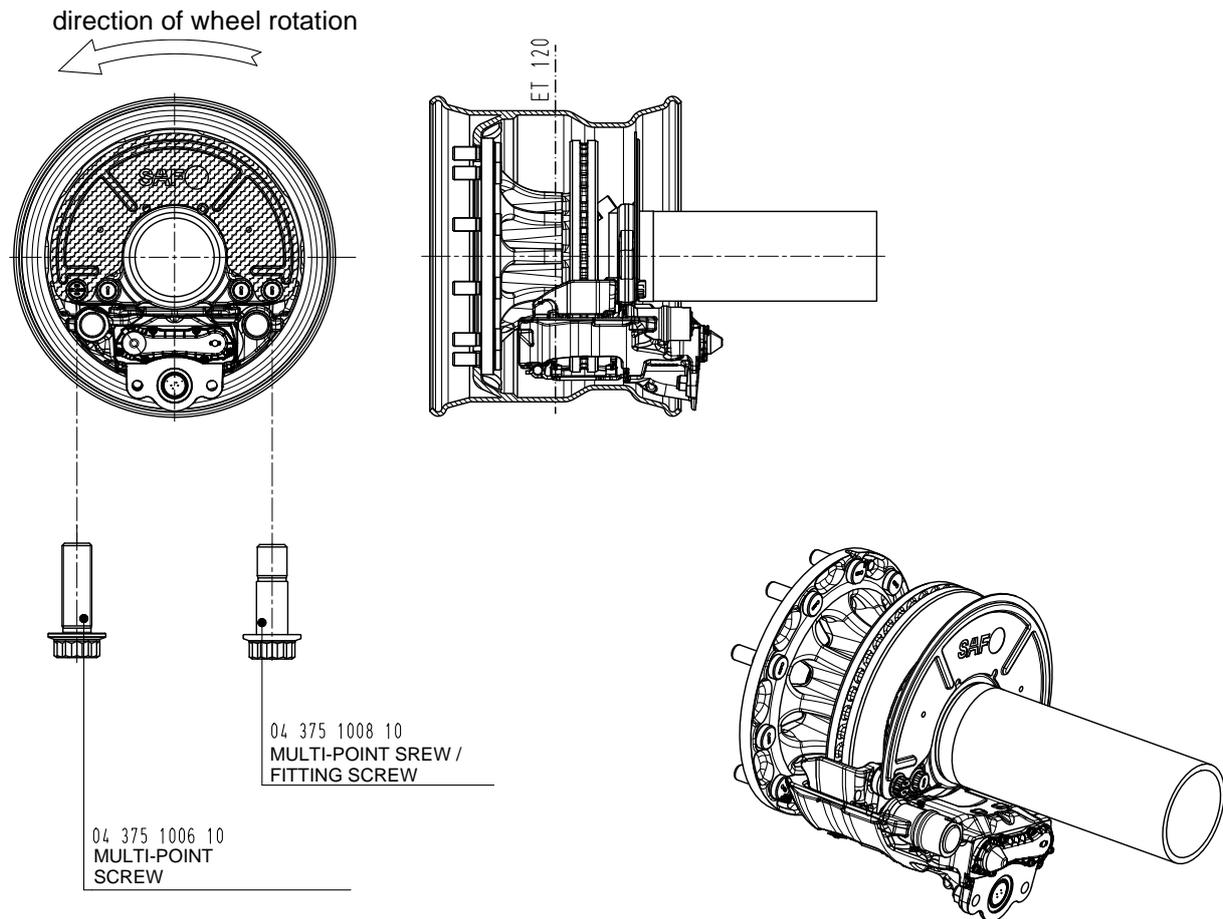

axle versions:  
**S(L)9-4218  
S9-3718**

The sketches show, irrelevant of the axle versions, how the SAF-O-Meter is fitted in the hub caps. It is not important on which side of the vehicle it is fitted, as the counter functions are independent of the direction of rotation.

## Installation instruction cover Plate

Axle version	Cover plate assembly
B(I)9-19	3 005 0283 00
B(I)9-22	3 005 0284 00

### Torque:

- Pre-tightening  
 $M_A = 120 \text{ Nm}$  (Thread free of oil and grease)
- Final tightening  
 $M_A = 450 \pm 30 \text{ Nm}$   
 bzw.  
 $M_A = 120 \text{ Nm} + 60^\circ$

## SAF TIRE PILOT I.Q.:

The SAF TIRE PILOT I.Q. continuously monitors the tire pressure of all tires mounted on the trailer. If necessary, the system automatically inflates the tires to the preset pressure.

The SAF TIRE PILOT I.Q. communicates with the towing vehicle via CAN and TEBS. In the event of a malfunction, a warning message can be sent to the driver on the dashboard.

### Basic Kits:

kit-numbers	naming
3 001 0271 01	Trailer Basic Kit - HALDEX
3 001 0301 01*	Trailer Basic Kit – ZF-Wabco
3 001 0302 01*	Trailer Basic Kit - KNORR

Complies with the requirements of EU Regulation 2019/2144 and ECE R 141

\*in trailer basic kit for Wabco or Knorr, an adapter cable is in scope of delivery.

**Attention:** For the connection between EBS and TIRE PILOT I.Q. Box an EBS-connection cable must be acquired from the EBS-manufacturer.

[See operating manual](#)

### axle kits for the specific axle type:

kit-numbers	Axle type
3 001 0300 00	B/BI (ET120)
3 001 0308 00	B/BI (ET120) - CD
3 001 0259 00	S (ET0)
3 001 0310 00	S (ET0) - CD
3 001 0306 00	BLL/BILL (ET120)
3 001 0305 00	BL/BIL (ET120)
3 001 0309 00	BL/BIL (ET120) - CD

In addition to the warning message on the dashboard in the driver's cabin, the SAF TIRE PILOT I.Q.

Note:  
The illustration is for example purposes only!  
Refer to the document for installation and assembly instructions.

## Recommendation for the technical requirement on the SAF INTRA CD TRAK

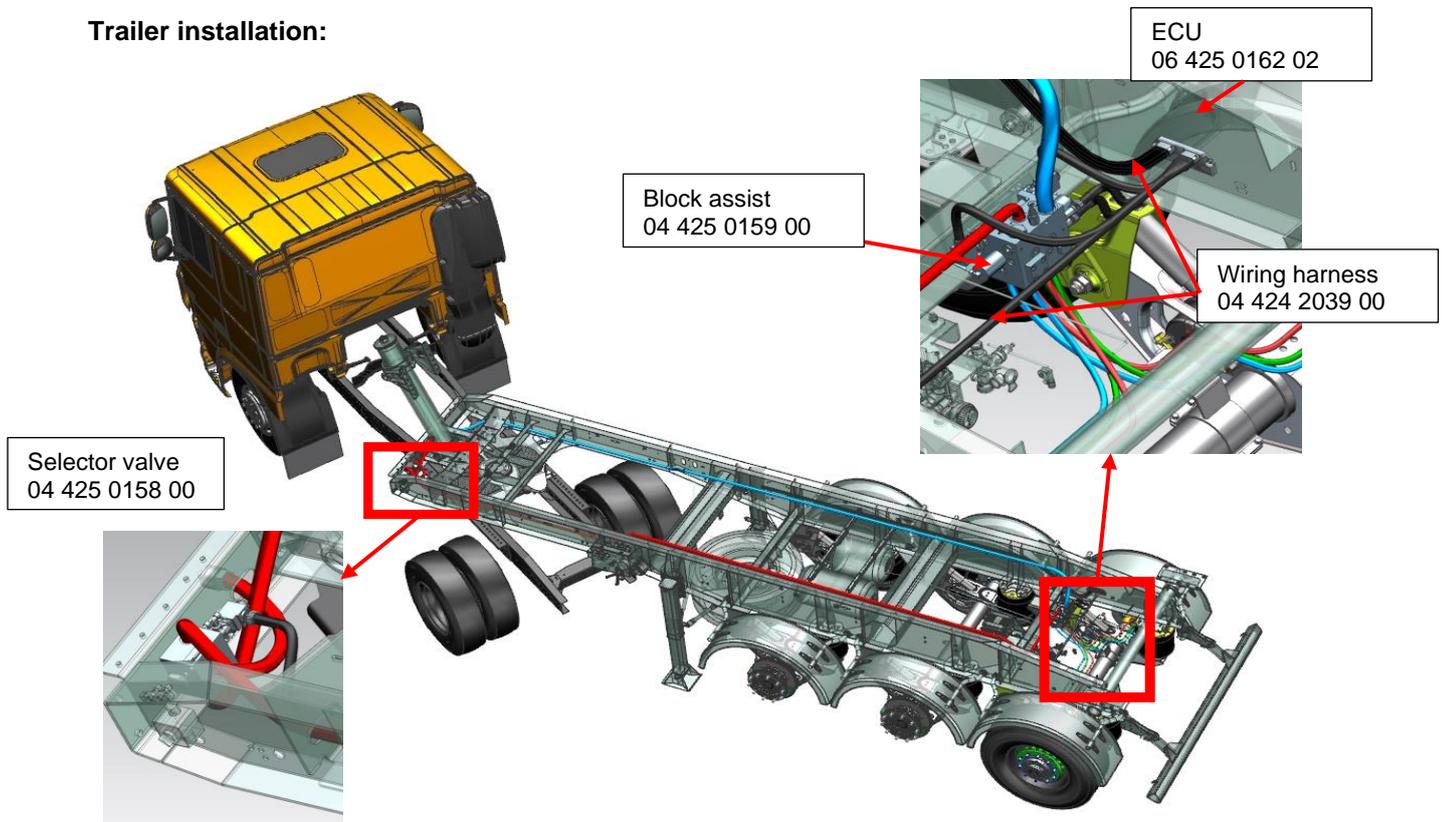

The driven axle [SAF INTRA CD TRAK](#) is optimised for trailers in the 9t standard range – both on-road and off-road. Specially developed for tippers operating in the area of construction sites or landfills, the drive axle supports the tractor unit on inclines and difficult terrain with its integrated additional drive. The additional drive is gained from the hydraulic installation which is used for the tipping cylinder or walking floor at the trailer.

The SAF TRAK control is designed for the use of the SAF INTRA CD TRAK axle combined with the hydraulic equipment of the tractor unit. The tractor unit needs to have the relevant setup to do so.

### Recommended technical equipment for the tractor unit

The tractor unit will have to be equipped with control switches / lights, CAN Bus signals, hydraulic pump and a 2-line hydraulic system with tipping valve. This is described in [the installation instructions](#).

### Trailer installation:

Optional is a cable (04 425 2041 00) from the ECU-unit to the tractor unit with 13 pin connector and a cable (04 425 2040 00) from the wiring harness to the selector valve. Both cables have a length of about 12 meter.

### Trailer integration

The axle is supplied including mounted and checked hydraulic pumps. The integration of the Intra suspension in the trailer is the same as current standard.

The controls for the use in a tipping trailer, walking floor,... covers the complete wiring harness, the ECU-unit as the selector valve to switch between trailer hydraulic and drive, plus the block assist for the driving direction. The selector valve is installed close to the tipping cylinder of the walking floor unit, the block assist should be installed close to the driven axle.

Be aware of the installation guide: [XL-PS40050BM-de-DE\\_Rev\\_C.pdf \(safholland.com\)](#)

The additional weight of the SAF INTRA CD TRAK axle is about 118 kg. The weight for the controls (wiring harness, block assist, selector valve) is about 31 kg.
