

SAF Axle Tire Inflation System Options – Elimination of the MTIS(PSI) Prep for all New OEM Production Orders of SAF Axle Assemblies

Effective: March 1st, 2022

Attention

SAF-HOLLAND will no longer be offering the MTIS(PSI) prep option for all new OEM production orders of SAF axle assemblies (*Figure 1*). Customers will have the option to specify the following:

- **SAF Tire Pilot Plus (TPP)** – This is our proprietary tire inflation system and is the standard position offering. When TPP is ordered, the axles will be prepped for TPP final installation and the trailer hardware kit will be provided to the trailer OEM.
- **Single Hole Axle Prep** – SAF-HOLLAND will still offer a single, center hole axle option to those customers wanting to install a MTIS(PSI) tire inflation system. The customer will be responsible for all other MTIS(PSI) hardware and trailer preparation for their tire inflation system.
