

SAF PosiLift™ Axle Lift System

Bolt-On PosiLift™ Axle Lift System now available on fixed frame CBX suspensions

Available June 2015

Please Note:

SAF-HOLLAND is pleased to announce that we will launch a new bolt-on PosiLift™ axle lift system on fixed frame CBX suspensions. This new version incorporates a plate that eliminates the need to weld the lift bracket to the suspension (Figure 1). Eliminating the welding operation provides a significant advantage to dealers or end users who wish to add a PosiLift™ lift system to an axle that was not originally equipped from the factory.

SAF will offer both the traditional weld on and the new bolt-on versions. Table 1 provides the lift kit numbers for the weld-on PosiLift™ and the new bolt-on PosiLift™ axle lift system.
