

## SAF UltraLite Trailer Mechanical Slider Suspensions

### Product Change Notice for SAF Mechanical Trailer Slider Suspension Sub-frame

Effective with shipments May 2017

#### Please Note:

SAF-HOLLAND has added a series of slots to the lower side sill flange of our UltraLite, DuraSystem and ULX40 Series mechanical sliding suspensions. These slots have been added to make it easier to install various bolt-on components (i.e. air tank mounting brackets, brake line routing brackets, etc.).

A total of (16) 0.44" x 0.90" slotted holes in side sills have been added to the bottom flange of the side sills (see **Detail A** for hole locations). These holes do not change the form, fit, or function of the slider sub-frame.
