

All SAF (Binkley) Mechanical Slide Boxes

Product Change Notification

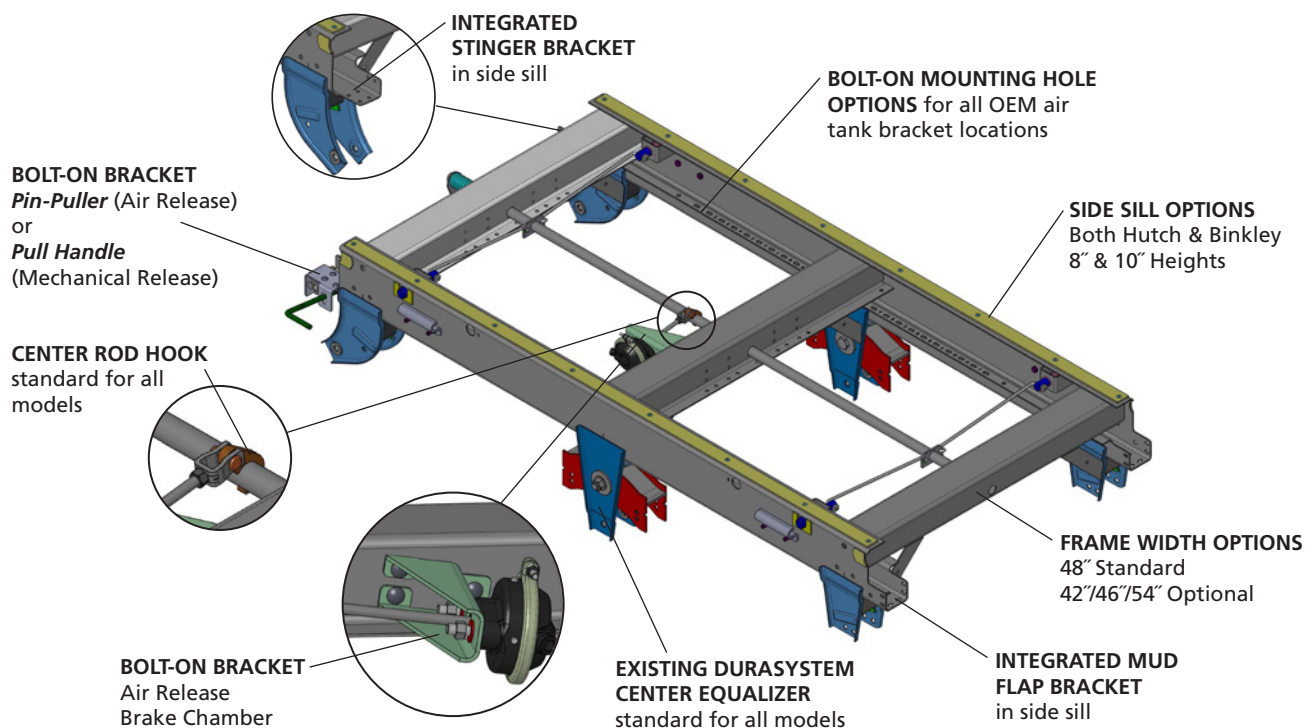

Attention

Beginning June 10, 2019, SAF-HOLLAND will be revising all mechanical slider assemblies per the illustration below. These product enhancements will reduce the number of slider variants, add mounting holes for bolt-on options, and reduce labor by eliminating extra welding.

The following changes are noted:

- Integrated mud flap brackets
- Inner flange mounting holes for tank brackets
- Bolt-on pin puller/pull handle bracket
- Integrated front stinger bracket
- Bolt-on air release chamber bracket
- DURASYSTEM™ center equalizer standard for all models
- Center rod hook standard for all models

These changes will apply to all ULX and UltraLite Series Sliders. New part numbers will be created to facilitate the changes. Your OEM Account Sales Manager will be contacting you with more specific implementation timing and part number changes.
