

## Readout of the axle serial number on each SAF hubcap for axles with compact bearings from May 2023

From 05.2023, SAF-HOLLAND will equip all SAF axles with an NFC chip. The NFC chip is hidden, safely protected from external influences, in both hubcaps of each axle.

The respective axle serial number is stored on this chip, which enables a unique identification of the axle. Currently, the axle can be identified via the nameplate with QR on the trailing arm under the vehicle.

In the future, the serial number can be conveniently and "in passing" with an NFC capable smartphone and the free SAF-HOLLAND app "SH Connect".

With the app you get access to the SAF-HOLLAND I.Q. Portal. Here you can find further information is available, such as product specific spare parts and technical documentation.

The SAF axles with the NFC chip can be recognized by the red radio symbol on the hub cap.

### Your benefits of NFC hubcap:

- The NFC hubcap is already installed ex works
- Easy identification of the trailer axle on the hubcap
- Quick access to technical documentation via the SAF-HOLLAND I.Q. Portal
- The introduction takes place without additional costs

### Benefits for your customers:

- Simple and secure identification of spare parts
- Quick access to appropriate maintenance and repair instructions
